

# **RADIOCARBON DATES V**

**Högne Jungner and Eloni Sonninen**

**HELSINKI 1998**

## **INTRODUCTION**

This report is the fifth date list from the Dating Laboratory of the University of Helsinki. The reports I - IV were published in 1979, 1983, 1989, and 1996. This list includes the samples from Hel-2755 to Hel-3501 dated 1989-1993. All dates given in the list are based on the activity of the new oxalic acid standard and reported according to the recommendation made by Stuiver and Polach (1977). The dates with  $\delta^{13}\text{C}$  values measured are corrected for isotopic fractionation.

The list is compiled according to laboratory number. Series of samples from the same site or context are, however, grouped together. At the end of the report an index according to the submitters' institute is included.

## **ACKNOWLEDGEMENTS**

We want to thank the submitters of the samples for their cooperation and comments. We thank Anne Forss, Minna Palviainen, Kirsi Pastinen, and Esa Roitto for skilful assistance in the laboratory, and Kari Malm and Marjatta Palmén for help in compiling the list.

## PUNASSUO SERIES, PERNIÖ

60°13'N, 23°02'E; 49 m a.s.l.

## RAKANMÄKI SERIES, TORNIO

64°21'N, 24°21'E

Coll. 1987 K. Mäkivuoti and subm. 1989 by M. Mäkivuoti.

General comment (KM): The radiocarbon ages correspond to the archaeological date (Roman Iron Age), except Hel-2781 and Hel-2783 which are in conflict with the archaeological dating.

Ref. Mäkivuoti (1987, 1988).

<b>Hel-2781 RM-87, Sample 2</b>	$790 \pm 100$
23 m a.s.l.	$\delta^{13}\text{C} = -25.3\%$
charcoal, depth 0.35 m	
<b>Hel-2782 RM-87, Sample 7</b>	$1510 \pm 110$
15 m a.s.l.	$\delta^{13}\text{C} = -25.3\%$
charcoal, depth 0.10 m	
<b>Hel-2783 RM-87, Sample 8</b>	$470 \pm 100$
17 m a.s.l.	$\delta^{13}\text{C} = -25.2\%$
charcoal, depth 0.30 m	
<b>Hel-2784 RM-87, Sample 15</b>	$1670 \pm 120$
15 m a.s.l.	$\delta^{13}\text{C} = -25.5\%$
charcoal, depth 0.30 m	
<b>Hel-2785 RM-87, Sample 17</b>	$1780 \pm 120$
17 m a.s.l.	$\delta^{13}\text{C} = -26.8\%$
charcoal, depth 0.20 m	
<b>Hel-2786 HIIDENKANGAS, OLHAVA, II</b>	$3460 \pm 130$
	$\delta^{13}\text{C} = -25.6\%$
OH-89, charcoal, 43.71 m a.s.l.	
Coll. and subm. 1989 by E. Jarva	
The dwelling place was estimated to be from Late Stone Age or Early Bronze Age.	

## PYHÄJOKI SERIES, SÄKYLÄ

61°01'N, 22°24'E; 50,74 m a.s.l.

Coll. and subm. 1989 by H. Roth.

<b>Hel-2787 Sample A</b>	$710 \pm 110$
charcoal, depth 0.20 m	$\delta^{13}\text{C} = -23.8\%$
<b>Hel-2788 Sample B</b>	$740 \pm 120$
charcoal, depth 0.40 m	$\delta^{13}\text{C} = -24.8\%$

**Hel-2789 Sample C1**                     $1350 \pm 110$   
 charcoal, depth 0.60 m                 $\delta^{13}\text{C} = -25.6\text{\%}$

**Hel-2790 Sample C2**                     $1600 \pm 110$   
 charcoal, depth 0.60 m                 $\delta^{13}\text{C} = -24.4\text{\%}$

### KALMOSSEN SERIES, FINBY, NÄRPES

Coll. and subm. 1989 by J. Weegar.

**Hel-2791 Sample 1**                     $1040 \pm 120$   
 wood                                         $\delta^{13}\text{C} = -21.5\text{\%}$

**Hel-2792 Sample 2**                     $940 \pm 120$   
 wood                                         $\delta^{13}\text{C} = -23.0\text{\%}$

### MUNASUO SERIES, PYHTÄÄ

60°38'N, 26°38'E; 21 m a.s.l.

Coll. and subm. 1989 by A. Korhola.

Ref. Korhola (1992, 1994).

**Hel-2793 MA 1**                     $3790 \pm 110$   
 peat, depth 3.80-3.88 m             $\delta^{13}\text{C} = -29.0\text{\%}$

**Hel-2794 MA 2**                     $3750 \pm 90$   
 peat, depth 4.32-4.40 m             $\delta^{13}\text{C} = -27.6\text{\%}$

**Hel-2795 MA 3**                     $3840 \pm 90$   
 peat, depth 5.40-5.50 m             $\delta^{13}\text{C} = -28.9\text{\%}$

**Hel-2796 MA 4**                     $4290 \pm 120$   
 peat, depth 6.30-6.40 m             $\delta^{13}\text{C} = -27.3\text{\%}$

**Hel-2797 MA 5**                     $4150 \pm 120$   
 peat, depth 6.70-6.80 m             $\delta^{13}\text{C} = -28.6\text{\%}$

**Hel-2798 MA 6**                     $3790 \pm 100$   
 peat, depth 6.20-6.30 m             $\delta^{13}\text{C} = -26.6\text{\%}$

**Hel-2799 MA 7**                     $3630 \pm 80$   
 peat, depth 6.22-6.30 m             $\delta^{13}\text{C} = -27.9\text{\%}$

charcoal,	depth 0.10-0.50 m	$\delta^{13}\text{C} = -23.6\text{\textperthousand}$
<b>Hel-2822</b>	<b>KASTELHOLM, ÅLAND ISLANDS</b>	$110 \pm 80$
Coll. and subm.	1990 by P. Erämetsä.	$\delta^{13}\text{C} = -22.4\text{\textperthousand}$
wood,	KS 65	

## KÖKAR SERIES, ÅLAND ISLANDS

59°56'N, 20°52'E  
 $x = 6648.3, y = 1493.3$ ; 5 m a.s.l.  
 Coll. 1989-1991 and subm. 1991 by K. Gustavsson.  
 General comment (KG): Series from the investigation of the Medieval Franciscan friary on the island of Hamnö, Kökar parish, Åland Islands. The samples Hel-2823 - Hel-2827 derive from the remains of a Medieval building complex (the foundations of a wooden house and a smithy) ca 150 m southeast of the friary. The samples contain pieces of charcoal from the smithy and from the open yard between the buildings. The datings are in correspondence to the archaeological results.  
 Ref. Gustavsson (1993a, 1993b, 1994).

<b>Hel-2823</b>	<b>Building complex</b>	$620 \pm 70$
charcoal,	depth 0.30 m	$\delta^{13}\text{C} = -24.1\text{\textperthousand}$

<b>Hel-2824 Building complex</b>	$570 \pm 70$
charcoal, depth 0.30 m	$\delta^{13}\text{C} = -22.2\text{\textperthousand}$
<b>Hel-2825 Building complex</b>	$450 \pm 70$
charcoal, depth 0.30 m	$\delta^{13}\text{C} = -23.6\text{\textperthousand}$
<b>Hel-2826 Building complex</b>	$500 \pm 70$
charcoal, depth 0.30 m	$\delta^{13}\text{C} = -24.2\text{\textperthousand}$
<b>Hel-2827 Building complex</b>	$600 \pm 80$
charcoal, depth 0.30 m	$\delta^{13}\text{C} = -23.2\text{\textperthousand}$

59°56'N, 20°52'E

x = 6648.4 y = 1493.3; 10 m a.s.l.

Coll. 1989-1991 and subm. 1991 by K. Gustavsson.

The samples Hel-2839 - Hel-2843 derive from the convent yard of the friary. Of them, sample Hel-2840 is from some kind of a furnace dug into the ground, whereas the rest is from beneath the foundation of a Medieval cemetery wall on the western side of the yard. The two charcoal samples, Hel-2839 - 2840, gave results that correspond very well to the archaeological results, whereas the three mortar ones gave unacceptable results. The latter might indicate that the mortar in the bottom of the cemetery wall, for some reason, had not been hardening in a normal way.

Ref. Gustavsson (1993a, 1993b, 1994).

<b>Hel-2839 Kökar 4, cemetery wall</b>	$570 \pm 70$
charcoal, depth 0.50 m	$\delta^{13}\text{C} = -23.4\text{\textperthousand}$
<b>Hel-2840 Kökar 5, furnace</b>	$590 \pm 70$
charcoal, depth 0.70 m	$\delta^{13}\text{C} = -26.2\text{\textperthousand}$
<b>Hel-2841 Kökar 1, cemetery wall</b>	modern
mortar, depth 0.40 m	$\delta^{13}\text{C} = -22.2\text{\textperthousand}$
<b>Hel-2842 Kökar 2, cemetery wall</b>	modern
mortar, depth 1.10 m	$\delta^{13}\text{C} = -21.7\text{\textperthousand}$
<b>Hel-2843 Kökar 2, cemetery wall</b>	$160 \pm 70$
mortar, depth 0.40 m	$\delta^{13}\text{C} = -20.8\text{\textperthousand}$

Coll. 1990-1993 and subm. 1993 by K. Gustavsson.

Series from the investigation of the Medieval Franciscan friary on the small island of Hamnö, Kökar parish, Åland Islands. The samples derive from the excavations of different parts of the ruins of the Medieval church, parts that have been found below the ground level in connection to the present church. Samples Hel-3459 and Hel-3465 - Hel-3466 are from the choir, Hel-3467 - Hel-3468 from the sacristy, and Hel-3460 - Hel-3463 and Hel-3469 - Hel-3471 from the western tower of the Medieval church. The samples contain as well pieces of charcoal as bones from the graves

and mortar from the building constructions. All the datings are in correspondence to the archaeological results of the excavations.  
 Ref. Gustavsson (1993a, 1993b, 1994).

## HÄÄDETKEIDAS SERIES, PARKANO

62°05'N, 22°45'E; 154.19 m a.s.l.

Coll. 1989 by K. Tolonen, A.W.H. Damman and T. Sallantaus, subm. 1989 by K. Tolonen.

Comment (KT): HÄX 1 - HÄX 18 have been obtained from a long core sampled on the western shore of the "central pond" on the dome of raised bog Häätkeidas (see map in Aario, 1932). The dates are stratigraphically consistent, the detailed analysis and interpretation in Damman *et al.* (1992).

<b>Hel-2829 HÄX-1</b>	$390 \pm 80$
peat, depth 0.60-0.65 m	$\delta^{13}\text{C} = -28.2\text{\textperthousand}$
<b>Hel-2830 HÄX-2</b>	$1140 \pm 80$
peat, depth 0.91-1.00 m	$\delta^{13}\text{C} = -26.0\text{\textperthousand}$
<b>Hel-2831 HÄX-4</b>	$2320 \pm 110$
peat, depth 1.45-1.50 m	$\delta^{13}\text{C} = -25.6\text{\textperthousand}$
<b>Hel-2832 HÄX-6</b>	$3690 \pm 90$
peat, depth 1.95-2.00 m	$\delta^{13}\text{C} = -27.2\text{\textperthousand}$
<b>Hel-2833 HÄX-7</b>	$4220 \pm 100$
peat, depth 2.45-2.50 m	$\delta^{13}\text{C} = -26.5\text{\textperthousand}$
<b>Hel-2834 HÄX-10</b>	$4450 \pm 100$
peat, depth 2.94-3.00 m	$\delta^{13}\text{C} = -26.2\text{\textperthousand}$
<b>Hel-2835 HÄX-12</b>	$4970 \pm 100$
peat, depth 3.45-3.50 m	$\delta^{13}\text{C} = -26.4\text{\textperthousand}$
<b>Hel-2836 HÄX-14</b>	$5620 \pm 110$
peat, depth 3.95-4.00 m	$\delta^{13}\text{C} = -24.2\text{\textperthousand}$
<b>Hel-2837 HÄX-16</b>	$6120 \pm 110$
peat, depth 4.44-4.48 m	$\delta^{13}\text{C} = -25.2\text{\textperthousand}$
<b>Hel-2838 HÄX-18</b>	$8200 \pm 120$
peat, depth 4.91-5.00 m	$\delta^{13}\text{C} = -26.8\text{\textperthousand}$

Comment (KT): HÄC-400 - HÄC-700 are from the bottom-most peat at a transect from the "central pond" to the western margin of the bog indicating a time transgressive centrifugal spread in the initiation of the mire.

<b>Hel-2865 HÄC-400</b>	$7390 \pm 120$
153.41 m a.s.l.	$\delta^{13}\text{C} = -25.7\text{\textperthousand}$
peat, depth 3.12-3.20 m	

**Hel-2866 HÄC-500**                             $6110 \pm 110$

62°22'N, 26°01'E  
Coll. 1990 by E. Ahola and subm. by J. Vilkuna.  
wood from a boat-shaped sledge runner  
Ref. Vilkuna (1993).

### VARIKKONIEMI SERIES, HÄMEENLINNA

61°00'N, 24°28'E; 82-84 m a.s.l.  
Coll. 1989 and subm. 1990 by E-L. Schulz.

General comment (E-L S): The samples are from a Late Iron Age/Early Medieval nucleus settlement. The charcoal samples were collected from hearths, ovens, building floors, walls and post holes; the wood samples from wooden structures at the site borders and house walls. In the settlement, seven horizontal strates have been discovered. The archaeological find material indicates use of the site over a span of 600 years, from the Merovingian period to the Middle Ages, about 700 AD to ca 1300 AD. With few exceptions, the radiocarbon dates are in agreement with the stratigraphical results and archaeological find material.  
Ref. E-L. Schulz and H-P. Schulz (1993).

<b>Hel-2856 Sample 1</b>	$13000 \pm 150$
charcoal, depth 0.20-0.25 m	$\delta^{13}\text{C} = -22.3\text{\textperthousand}$
<b>Hel-2857 Sample 2</b>	$920 \pm 110$
charcoal, depth 0.20-0.30 m	$\delta^{13}\text{C} = -23.0\text{\textperthousand}$
<b>Hel-2858 Sample 3</b>	$780 \pm 90$
charcoal, depth 0.20-0.30 m	$\delta^{13}\text{C} = -24.0\text{\textperthousand}$
<b>Hel-2859 Sample 4</b>	$120 \pm 100$
wood, depth 0.60 m	$\delta^{13}\text{C} = -21.3\text{\textperthousand}$
<b>Hel-3063 Sample 1 KS III</b>	$940 \pm 90$
charcoal, depth 0.25 m	$\delta^{13}\text{C} = -25.2\text{\textperthousand}$

charcoal, depth 0.25 m	$\delta^{13}\text{C} = -23.4\text{\textperthousand}$
<b>Hel-3065 Sample 3 KS VII</b>	$600 \pm 100$
charcoal, depth 0.35-0.40 m	$\delta^{13}\text{C} = -25.5\text{\textperthousand}$
<b>Hel-3066 Sample 4 KS V</b>	$1060 \pm 90$
charcoal, depth 0.30-0.35 m	$\delta^{13}\text{C} = -24.9\text{\textperthousand}$
<b>Hel-3071 Sample 5</b>	$1850 \pm 100$
wood from a wooden structure of the settlement border, depth 1.15 m	$\delta^{13}\text{C} = -25.8\text{\textperthousand}$
<b>Hel-3207 Sample 6 KS VI</b>	$970 \pm 110$
charcoal from a hearth in level IV, depth 0.30 m	$\delta^{13}\text{C} = -25.7\text{\textperthousand}$

### VIRALA 89 SERIES, JANAKKALA

60°54'N, 24°39'E; 88-90 m a.s.l.

Coll. 1989 by E-L. Schulz and H-P. Schulz, subm 1990 by H-P. Schulz.

General comment (H-P S): The samples were collected from the cultural layer and a pit hearth of a Late Iron Age settlement (ca 600 - 1200 AD).

<b>Hel-2860 Sample 1</b>	$1010 \pm 90$
charcoal from a pit hearth, depth 0.35 m	$\delta^{13}\text{C} = -23.1\text{\textperthousand}$
<b>Hel-2861 Sample 2</b>	$1280 \pm 100$
charcoal from the lower cultural layer, depth 0.30 m	$\delta^{13}\text{C} = -22.9\text{\textperthousand}$
<b>Hel-2862 Sample 3</b>	$840 \pm 90$
charcoal from the upper cultural layer, depth 0.40 m	$\delta^{13}\text{C} = -26.2\text{\textperthousand}$

**Hel-2863 HATTELMALA TYRNOJA, HÄMEENLINNA**       $1050 \pm 110$   
 $\delta^{13}\text{C} = -23.9\%$ .  
 60°58'N, 29°28'E; 105 m a.s.l.  
 Coll. 1989 and 1990 by H-P. Schulz and E-L. Schulz, subm. 1990 by H-P. Schulz.  
 charcoal, depth 0.40 m  
 General comment (E-L S): The sample was collected from an Iron Age dwelling site,  
 which was inhabited from ca the 2nd to the 11th century.

**Hel-2864 SÄÄKSMÄKITALO 1989, SÄÄKSMÄKI**      modern  
 $\delta^{13}\text{C} = -23.6\%$ .  
 61°11'N, 24°04'E; 92-93 m a.s.l.  
 Coll. 1989 by M. Tusa and subm. 1990 by A-L. Hirvilioto.  
 charcoal, depth 0.08-0.10 m  
 Comment (P.Hamari): The sample was taken from a hearth. The dating is not in  
 agreement with the expected Iron Age dating.

**Hel-2865 - Hel-2871** See HÄÄDETKEIDAS SERIES Hel-2829.

#### KAURASTENSUO SERIES, LAMMI

61°01'N, 24°58'E; 154 m a.s.l.  
 Coll. 1989 by A.W.H. Damman, P. Saaristo and L.C. Johnson, subm. 1989 by K.  
 Tolonen.  
 General comment (KT): Hel-2872 - 2875 were collected in 1989 from the same site  
 (Kaur 1A) as the eleven dated samples in Tolonen (1987), Table 7. The dates are  
 stratigraphically consistent and have been used for carbon accumulation studies  
 (Tolonen *et al.* 1992a, Tolonen and Turunen 1996).

<b>Hel-2872 Kaur-4</b>	$30 \pm 80$
peat, depth 0.35-0.41 m	$\delta^{13}\text{C} = -22.2\%$ .

 charcoal from a cairn, depth 0.20-0.30 m                     $\delta^{13}\text{C} = -23.1\text{\textperthousand}$

#### **SUURISUO SERIES, JANAKKALA**

60°59'N, 24°40'E; 130 m a.s.l.  
 Coll 1989. by K. Tolonen and A.W.H. Damman, subm. by K. Tolonen.

General comment (KT): The samples were collected from a long core obtained from a herbrich sedge fen site at the SE part of the mire. The dates are stratigraphically consistent and were applied for the "actual rate" of the peat accumulation by means of Clymo's (1984) model (Tolonen *et al.* 1992a).

<b>Hel-2930 Jan 3-89-7</b>	$4330 \pm 110$

**Jomala Church**

<b>Hel-3092</b>	$830 \pm 75$
Coll. 1991 by E. Palamarz and P. Palamarz,	$\delta^{13}\text{C} = -13.9\text{\textperthousand}$

subm. 1992 by Å. Ringbom

Comment (ÅR): The sample was taken from the foundations of the original chancel of the church, which had been torn down in the 1840s, when the church was enlarged and modernized. Since then, the foundations of the chancel have been hidden under the floor of the present transept. The floor of the transept was reopened during the restoration of the Jomala church in 1991 - 1992.

### Saltvik Church

Subrn. by Å. Ringbom.

<b>Hel-3294 Saka 1</b>	$610 \pm 80$
mortar, the porch vault, from the attic of the porch.	$\delta^{13}\text{C} = -12.0\text{\textperthousand}$

charcoal, depth 0.55 m	$\delta^{13}\text{C} = -23.8\%$

### Hel-2952 PUULAVESI, RYÖKÄSVESI

**$720 \pm 120$**

$\delta^{13}\text{C} = -21.7\%$

Coll. 1988 and subm. 1989 by P. Zetterberg.

FIM0215

wood, depth 0.80 m

Comment (PZ): Submerged pine forest 1 m below the present water level of the lake Puulavesi.

## SUBFOSSIL PINE SERIES, ENONTEKIÖ

Coll. and subm. 1991 by M. Eronen and P. Zetterberg.

General comment (ME): Age control of Finnish Lapland pine dendrochronology.

<b>Hel-2953 FIL3094, Hattulompolo</b>	$4900 \pm 110$
wood	$\delta^{13}\text{C} = -23.0\text{\textperthousand}$
<b>Hel-2954 FIL1402, Haukijärvi</b>	$3750 \pm 110$
wood	$\delta^{13}\text{C} = -21.8\text{\textperthousand}$
<b>Hel-3062 FIL1419, Haukijärvi</b>	$4650 \pm 100$
$x = 76265, y = 32970; 475 \text{ m a.s.l.}$	$\delta^{13}\text{C} = -23.3\text{\textperthousand}$
wood ( <i>Pinus sylvestris</i> )	
Comment (PZ): Subfossil pine wood from lake bottom 18 km from the present tree line. The dating from the 200-50 outermost rings.	

## SIERIJÄRVI 474 A SERIES, ROVANIEMI

66°27'N, 26°00'E; 90.1 m a.s.l.

Coll. 1989 and subm. 1990 by H. Kotivuori.

Series comment (HK): The samples have been collected for dating from an iron smelting oven. Sample 1 has been taken from inside of the object, sample 2 from outside of the construction. The datings agree with the archaeological finds from the Early Iron Age.

Ref. Kotivuori (1996).

<b>Hel-2955 Sample 1</b>	$2090 \pm 100$
charcoal, depth 0.20-0.28 m	$\delta^{13}\text{C} = -25.4\text{\textperthousand}$
<b>Hel-2956 Sample 2</b>	$1820 \pm 110$
charcoal, depth 0.20-0.28 m	$\delta^{13}\text{C} = -24.9\text{\textperthousand}$

## KIRKKONIEMI SERIES, JONKERI, KUHMO

63°51'N, 29°54'E

$x = 7082\ 30, y = 495\ 20; 205 \text{ m a.s.l.}$

Coll. 1983 and subm. 1989 by E. Suominen.

General comment (ES): By the local tradition, there has been an orthodox chapel in Kirkkonиеми.

<b>Hel-2957 KM 22178:4</b>	$2390 \pm 90$
charcoal, depth 0.25 m	$\delta^{13}\text{C} = -24.7\text{\textperthousand}$
Comment (ES): Charcoal from the original surface beneath a small cairn. It possibly dates a forest fire.	

**Hel-2958 KM 22178:6**  $610 \pm 110$   
 charcoal, depth 0.25 m  $\delta^{13}\text{C} = -24.6\%$ .  
 Comment (ES): Charcoal from a cairn, obviously a stove.

**Hel-2959 KOTALAHTI, KOTILA, PUOLANKA**  $1570 \pm 110$   
 $\delta^{13}\text{C} = -24.8\%$ .

64°32'N, 27°32'E  
 $x = 7159\ 60, y = 525\ 50$ ; 168 m a.s.l.  
 Coll. 1987 and subm. 1988 by E. Suominen.  
 23904:56, charcoal, depth 0.35 m  
 Comment (ES): Kotalahti is a dwelling site with late Neolithic find material. The sample is from a pit filled with burnt stones and charcoal.

### STORTRÄSK 2 SERIES, SIPOO

60°16'N, 25°10'E; 32.4 m a.s.l.  
 Coll. and subm. 1990 by K. Sarmaja-Korjonen.  
 General comment (K S-K): The dates can be compared with the results obtained from three other lakes situated nearby. This series seems like a researcher's dream: the spread of *Picea* occurred about 3500 BP also in the other lakes and the deposition rate curve based on the dates is linear like a ruler. Also the age for the clearance period is perfectly in accordance with those from the other lakes.  
 Ref. Sarmaja-Korjonen (1992).

**Hel-2960 Storträsk 1**  $3690 \pm 120$   
 gyttja, depth 0.43-0.50 m  $\delta^{13}\text{C} = -32.1\%$ .  
 Comment (K S-K): The spread of spruce.

**Hel-2961 Storträsk 2**  $2990 \pm 70$   
 gyttja, depth 0.30-0.40 m  $\delta^{13}\text{C} = -30.3\%$ .

**Hel-2962 Storträsk 3**  $2360 \pm 90$   
 gyttja, depth 0.20-0.30 m  $\delta^{13}\text{C} = -32.2\%$ .  
 Comment (K S-K): Period of prehistoric agricultural activities.

### GONUR SERIES, TURKMENISTAN

Coll. and subm. 1990 by F. Hiebert.  
 Ref. Hiebert (1994)

**Hel-2963 Room 200**  $3540 \pm 80$   
 charcoal, depth 0.20 m  $\delta^{13}\text{C} = -22.9\%$ .

**Hel-2964 Room 65**  $3750 \pm 90$   
 charcoal, depth 1.40 m  $\delta^{13}\text{C} = -15.0\%$ .

<b>Hel-2965 Room 226</b>	$3550 \pm 80$
charcoal	$\delta^{13}\text{C} = -16.3\text{\textperthousand}$
<b>Hel-2966 Room 226</b>	$3410 \pm 80$
charcoal	$\delta^{13}\text{C} = -14.2\text{\textperthousand}$
<b>Hel-2967 Room 178</b>	$3380 \pm 110$
charcoal	$\delta^{13}\text{C} = -12.8\text{\textperthousand}$
<b>Hel-2968 Room 134</b>	$3600 \pm 80$
charcoal	$\delta^{13}\text{C} = -23.5\text{\textperthousand}$
<b>Hel-2969 Room 208</b>	$3480 \pm 90$
charcoal	$\delta^{13}\text{C} = -22.2\text{\textperthousand}$
<b>Hel-2970 Room 266</b>	$3380 \pm 90$
charcoal	$\delta^{13}\text{C} = -16.3\text{\textperthousand}$

### MUNASUO SERIES, PYHTÄÄ

60°30'N, 26°30'E; 22 m a.s.l.  
 Coll. and subm. 1990 by H. Seppä.  
 Ref. Seppä (1991).

<b>Hel-2971 Sample 1</b>	$580 \pm 110$
peat, depth 1.0 m	$\delta^{13}\text{C} = -24.9\text{\textperthousand}$
Comment (HS): Cerealia curve begins.	
<b>Hel-2972 Sample 2</b>	$2300 \pm 90$
peat, depth 2.20 m	$\delta^{13}\text{C} = -25.2\text{\textperthousand}$
<b>Hel-2973 Sample 3</b>	$2760 \pm 100$
peat, depth 3.0 m	$\delta^{13}\text{C} = -25.2\text{\textperthousand}$
<b>Hel-2974 Sample 4</b>	$3320 \pm 120$
peat, depth 3.90 m	$\delta^{13}\text{C} = -25.2\text{\textperthousand}$
<b>Hel-2975 Sample 5</b>	$3610 \pm 100$
peat, depth 5.20 m	$\delta^{13}\text{C} = -27.3\text{\textperthousand}$
<b>Hel-2976 Sample 6</b>	$3930 \pm 90$
peat, depth 6.0 m	$\delta^{13}\text{C} = -27.1\text{\textperthousand}$
Comment (HS): Lake infilling.	

### TAINIARO SERIES, SIMO

65°51'N, 25°30'E; 79 m a.s.l.

Coll. 1989 and 1990 by T. Wallenius and P. Pesonen, subm. 1990 by T. Wallenius.  
General comment (P.Hamari): Charcoal from graves. The datings are in accordance with the archaeological material showing Early Comb Ware settlement on the site.

<b>Hel-2977 Sample I Grave/90</b>	$5410 \pm 120$
charcoal, depth 0.58 m	$\delta^{13}\text{C} = -26.1\text{\textperthousand}$
<b>Hel-2978 Sample I KM 24925:1852</b>	$5760 \pm 120$
charcoal, depth 0.53 m	$\delta^{13}\text{C} = -25.5\text{\textperthousand}$
<b>Hel-2979 Sample III KM 24925:1852</b>	$5430 \pm 120$
charcoal, depth 0.49 m	$\delta^{13}\text{C} = -23.5\text{\textperthousand}$

### KUIVANIEMI SERIES, VESKANKANGAS

65°42'N, 25°45'E; 88-90 m a.s.l.

Coll. 1990 by J. Turpeinen and subm. by T. Wallenius.

General comment (P.Hamari ): Charcoal from a dwelling site. The datings are in agreement with the archaeological material showing pre-ceramic Stone Age settlement on the site.

<b>Hel-2980 Sample I/90</b>	$6290 \pm 120$
charcoal, depth 0.53 m	$\delta^{13}\text{C} = -24.1\text{\textperthousand}$
<b>Hel-2981 Sample I/89</b>	$6140 \pm 110$
charcoal, depth 0.26 m	$\delta^{13}\text{C} = -24.2\text{\textperthousand}$
<b>Hel-2982 Sample II/89</b>	$6150 \pm 110$
charcoal, depth 0.45 m	$\delta^{13}\text{C} = -24.1\text{\textperthousand}$
<b>Hel-2983 Sample II/90</b>	$5990 \pm 110$
charcoal, depth 0.23 m	$\delta^{13}\text{C} = -23.4\text{\textperthousand}$

### CAQUIAVIRI SERIES, TIQUISCHULLPA, PERU

4000 m a.s.l.

Coll.1989 by M. Pärssinen and subm. 1991 by A. Siiräinen.

<b>Hel-2984 Sample II:9</b>	$210 \pm 130$
charcoal, depth 0.70 m	$\delta^{13}\text{C} = -21.3\text{\textperthousand}$

**HeI-2985 Sample II:6**       $360 \pm 130$   
charcoal, depth 0.60 m       $\delta^{13}\text{C} = -23.4\%$ .

**HeI-2986 RIUTULAN POLKU, INARI**       $3570 \pm 170$   
 $\delta^{13}\text{C} = -26.1\%$

68°55'N, 27°01'E; 122 m a.s.l.

Coll. 1989 by A. Arponen, subm. 1989 by A. Arponen and C. Carpelan.  
charcoal, depth 0.10 m

#### TÖRMÄNEN SERIES, SYLVENVAARA, INARI

68°36'N, 27°33'E; 135 m a.s.l.

Coll. 1989 by A. Arponen, subm. 1989 by A. Arponen and C. Carpelan.

## HAILUOTO CHURCH SERIES, HAILUOTO

65°01'N, 24°43'E; x = 7213 70, y = 2533 96

Coll. 1987 and subm. 1990 by K. Paavola.

**Series comment (KP):** All the samples are from the bottom sand of the old Hailuoto church ruin. Three bone samples, Hel-2989, Hel-2990 and Hel-2991, are from different graves found in the northern part of the church. The grave constructions and the location indicate older burials (Late Medieval - early 17th century) than the radiocarbon results, except Hel-2991 which better agrees with the archeological data. Other two samples Hel-2992 and Hel-2993 represent wooden constructions which are not archaeologically dated.

Ref. Paavola (1995).

**Hel-2989 Cranium/Grave 232**       $240 \pm 80$   
6.20 m a.s.l.       $\delta^{13}\text{C} = -20.2\%$ .  
bone, depth 1.45 m

**Hel-2990 Cranium/Grave 110**       $150 \pm 100$   
6.15 m a.s.l.       $\delta^{13}\text{C} = -19.3\text{\%}$ .  
bone, depth 1.30 m

**Hel-2991 Cranium/Grave 110**  $370 \pm 100$   
 6.75 m a.s.l.  $\delta^{13}\text{C} = -19.2\text{\%}$ .  
 bone, depth 0.80 m

<b>Hel-2992 HK-87/Sample 701</b>	<b>710 ± 100</b>
5.80 m a.s.l.	$\delta^{13}\text{C} = -26.0\text{\textperthousand}$
charcoal, depth 1.80 m	
<b>Hel-2993 HK-87/Sample 708</b>	<b>270 ± 90</b>
6.10 m a.s.l.	$\delta^{13}\text{C} = -26.8\text{\textperthousand}$
wood, depth 1.60 m	

**Hel-2994 - Hel-2996** See ÅLAND CHURCHES SERIES (Hammarland) Hel-2937.

**Hel-2997 - Hel-3002** See ÅLAND CHURCHES SERIES (Eckerö) Hel-2937.

### JOMALA SERIES, ÅLAND ISLANDS

60°07'N, 19°55'E

Coll. and subm. by O. Hörfors.

General comment (OH): Near the Jomala church, Åland, stands the ruin of a cellarium, once a manor in a Medieval fortified manor complex. The excavation finds have proven the building having been in use towards the end of the 13th century. However, the strayfinds and the thickness of the oldest cultural layers have indicated that it might be older. The rather complicated pattern of walls suggests different periods of erection. The samples were taken so that different phases of erection could be identified and that the complex could be dated as a whole, if possible.

Ref. Hörfors (1991).

<b>Hel-3003 22:4/Sample 1</b>	<b>860 ± 60</b>
mortar	$\delta^{13}\text{C} = -15.0\text{\textperthousand}$
<b>Hel-3004 22:4/Sample 2</b>	<b>810 ± 70</b>
mortar	$\delta^{13}\text{C} = -17.6\text{\textperthousand}$
<b>Hel-3007 22:4/Sample 3</b>	<b>1000 ± 70</b>
mortar	$\delta^{13}\text{C} = -13.1\text{\textperthousand}$
<b>Hel-3008 22:4/Sample 4</b>	<b>880 ± 80</b>
mortar	$\delta^{13}\text{C} = -17.6\text{\textperthousand}$

### BAY OF BISCAY SERIES, SPAIN

Coll. and subm. by A. Cearreta.

43°28'N, 3°29'W

Samples from a peat bed containing stumps and trunks of trees, located on the foreshore of a sandy beach regularly covered by the tide.

General comment (AC): This is the first reference of submerged forest in northern Spain where Quaternary deposits are scarce and patchy.

<b>Hel-3005 N 1</b>	<b>4070 ± 100</b>
wood from submerged trees	NA
<b>Hel-3006 N 2</b>	<b>3080 ± 100</b>
wood from submerged trees	$\delta^{13}\text{C} = -28.8\text{\%}$

## MUTUSJÄRVI AND IIJÄRVI SERIES, INARI

Coll. and subm. 1990-1993 by M. Kotilainen.

General comment (MK): The aim of the study was to reconstruct the reactivation history of the postglacial dune fields in the Mutusjärvi and Iijärvi areas. One main objective of this work was to define the cause of the reactivation, with the aim of unravelling the influence of human activity and climate. The radiocarbon dating was used to date buried charcoal horizons, usually found on the lee side of a dune.

Ref. Kotilainen (1991, 1994).

### Mutusjärvi series

#### Site 14 Series

x = 7648 45, y = 488 15; 155 m a.s.l.

Series comment (MK): A series of 4 charcoal layers.

<b>Hel-3009 Sample 14/1</b>	<b>3360 ± 130</b>
charcoal, depth 1.0 m	$\delta^{13}\text{C} = -24.9\text{\%}$

Comment (MK): A strong charcoal layer overlain by 50 cm of stratified sand.

<b>Hel-3010 Sample 14/2</b>	<b>2320 ± 90</b>
charcoal, depth 0.50 m	$\delta^{13}\text{C} = -25.0\text{\%}$

<b>Hel-3011 Sample 14/3</b>	<b>1660 ± 90</b>
charcoal, depth 0.23 m	$\delta^{13}\text{C} = -24.2\text{\%}$

<b>Hel-3439 Sample 14/4</b>	<b>820 ± 90</b>
charcoal, depth 0.12 m	$\delta^{13}\text{C} = -26.9\text{\%}$

#### Site-12 Series

x = 7650 70, y = 488 18; 150 m a.s.l.

Series comment (MK): A series of 5 charcoal horizons on the lee side of a dune.

<b>Hel-3012 Sample 12/14</b>	<b>510 ± 100</b>
charcoal, depth 0.01 m	$\delta^{13}\text{C} = -26.9\text{\%}$

<b>Hel-3017 Sample 12/9</b>	<b>7620 ± 100</b>
charcoal, depth 0.70 m	$\delta^{13}\text{C} = -27.0\text{\%}$

<b>Hel-3018 Sample 12/11</b>	$6920 \pm 130$
charcoal, depth 0.60 m	$\delta^{13}\text{C} = -27.1\text{\textperthousand}$
<b>Hel-3019 Sample 12/12</b>	$6560 \pm 80$
charcoal, depth 0.56 m	$\delta^{13}\text{C} = -27.0\text{\textperthousand}$
<b>Hel-3179 Sample 12/10</b>	$7770 \pm 170$
charcoal, depth 0.68 m	$\delta^{13}\text{C} = -24.2\text{\textperthousand}$
<b>Hel-3437 Samples 6/1 + 6/2</b>	$680 \pm 80$
$x = 7651\ 73, y = 489\ 80; 150\ \text{m a.s.l.}$	$\delta^{13}\text{C} = -27.7\text{\textperthousand}$
charcoal, depths 0.02 m and 0.10 m	
Comment (MK): Two samples were combined. According to the stratigraphic evidence it is probable that they represent a single event.	
<b>Hel-3438 Sample 8/2</b>	$870 \pm 80$
$x = 7646\ 06, y = 487\ 16; 150\ \text{m a.s.l.}$	$\delta^{13}\text{C} = -26.5\text{\textperthousand}$
charcoal, depth 0.06 m	
<b>Hel-3440 Samples 15/1 + 15/2</b>	$800 \pm 70$
$x = 7651\ 60, y = 490\ 30; 150\ \text{m a.s.l.}$	$\delta^{13}\text{C} = -26.8\text{\textperthousand}$
charcoal, depths 0.07 m and 0.10 m	
Comment (MK): The stratigraphic evidence suggests that the two layers represent a single event.	
<b>Hel-3441 Samples 16/1 + 16/2</b>	$860 \pm 90$
$x = 7652\ 10, y = 485\ 25; 155\ \text{m a.s.l.}$	$\delta^{13}\text{C} = -27.0\text{\textperthousand}$
charcoal, depths 0.04 m and 0.08 m	
Comment (MK): Two samples were combined.	
<b>Hel-3442 Sample 20/2</b>	$2360 \pm 120$
$x = 7650\ 90, y = 490\ 17; 150\ \text{m a.s.l.}$	$\delta^{13}\text{C} = -26.9\text{\textperthousand}$
charcoal, depth 0.30 m	

## Iijärvi series

### Site 71 Series

$x = 7699\ 40, y = 526\ 55; 210\ \text{m a.s.l.}$

Series comment (MK): A series of 5 charcoal horizons on the lee side of a dune.

#### Hel-3013 Sample 71/1

charcoal, depth 1.55 m

Comment (MK): Probably the same horizon as 71/2.

#### Hel-3014 Sample 71/2

charcoal, depth 1.50 m

$5400 \pm 120$

$\delta^{13}\text{C} = -26.1\text{\textperthousand}$

$5610 \pm 120$

$\delta^{13}\text{C} = -24.9\text{\textperthousand}$

<b>Hel-3015 Sample 71/4</b>	$2190 \pm 90$
charcoal, depth 1.28 m	$\delta^{13}\text{C} = -25.7\text{\textperthousand}$
<b>Hel-3016 Sample 71/5</b>	$1090 \pm 120$
charcoal, depth 1.18 m	$\delta^{13}\text{C} = -26.1\text{\textperthousand}$
<b>Hel-3178 Sample 71/3</b>	$3090 \pm 150$
charcoal, depth 1.41 m	$\delta^{13}\text{C} = -26.8\text{\textperthousand}$
<b>Hel-3411 Sample 52</b>	$1150 \pm 90$
$x = 7699.67, y = 524.90; 210 \text{ m a.s.l.}$	$\delta^{13}\text{C} = -26.4\text{\textperthousand}$
charcoal, depth 0.95 m	
Comment (MK): Buried charcoal horizon from the windward side of a dune.	

**Site 53 Series** $x = 7699.60, y = 524.86; 210 \text{ m a.s.l.}$ 

Series comment (MK): A series of 4 charcoal horizons (2 samples previously analysed, see ref.).

<b>Hel-3412 Sample 53/1</b>	$700 \pm 80$
charcoal, depth 0.97 m	$\delta^{13}\text{C} = -28.0\text{\textperthousand}$
<b>Hel-3413 Sample 53/2</b>	$1990 \pm 90$
charcoal, depth 1.0 m	$\delta^{13}\text{C} = -27.0\text{\textperthousand}$

**Site 54 Series** $x = 7700.95, y = 526.17; 220 \text{ m a.s.l.}$ 

Series comment (MK): A series of 1 charcoal layer (A/1) on the windward side and 3 charcoal layers (C/1-C/3) on the lee side of the dune 54.

<b>Hel-3414 Sample 54 A/1</b>	$1470 \pm 90$
charcoal, depth 0.65 m	$\delta^{13}\text{C} = -27.2\text{\textperthousand}$
<b>Hel-3415 Sample 54 C/1</b>	$1900 \pm 80$
charcoal, depth 0.50 m	$\delta^{13}\text{C} = -26.0\text{\textperthousand}$
Comment (MK): A charcoal horizon corresponding to 54 A/1.	
<b>Hel-3416 Sample 54 C/2</b>	$3510 \pm 90$
charcoal, depth 0.70 m	$\delta^{13}\text{C} = -26.6\text{\textperthousand}$
<b>Hel-3417 Sample 54 C/3</b>	$4670 \pm 140$
charcoal, depth 0.80 m	$\delta^{13}\text{C} = -26.7\text{\textperthousand}$
<b>Hel-3418 Sample 55</b>	$670 \pm 90$
$x = 7700.60, y = 527.25; 210 \text{ m a.s.l.}$	$\delta^{13}\text{C} = -27.2\text{\textperthousand}$
charcoal, depth 0.60 m	

**Site 65 Series**

x = 7700 26, y = 525 70; 200 m a.s.l.

Series comment (MK): A series of 2 charcoal horizons (divided in 5 sublayers) on the windward side of a dune.

**Hel-3419 Sample 65/2**                                     $940 \pm 90$   
 charcoal, depth 0.25 m                                     $\delta^{13}\text{C} = -27.0\text{\%}$

**Hel-3420 Sample 65/1**                                     $3700 \pm 90$   
 charcoal, depth 0.35 m                                     $\delta^{13}\text{C} = -26.1\text{\%}$

**Hel-3421 Sample 66**                                     $880 \pm 80$   
 x = 7700 37, y = 525 77; 200 m a.s.l.                                     $\delta^{13}\text{C} = -26.8\text{\%}$

charcoal, depth 0.25 m

Comment (MK): Some artefacts observed on the surface of the charcoal horizon.

**Hel-3422 Sample 67**                                     $1150 \pm 90$   
 x = 7704 00, y = 530 95; 205 m a.s.l.                                     $\delta^{13}\text{C} = -27.0\text{\%}$   
 charcoal, depth 0.33 m

**Site 69 Series**

x = 7702 25, y = 528 60; 205 m a.s.l.

Series comment (MK): A series of 4 charcoal horizons (the lowest being an AMS-date). The series is accompanied by 5 TL/OSL dates from above and below each charcoal horizon.

**Hel-3429 Sample 69/1**                                     $2890 \pm 110$   
 charcoal, depth 0.48 m                                     $\delta^{13}\text{C} = -26.4\text{\%}$

**Hel-3430 Sample 69/2**                                     $6040 \pm 120$   
 charcoal, depth 0.82 m                                     $\delta^{13}\text{C} = -26.7\text{\%}$

**Hel-3431 Sample 69/3**                                     $6790 \pm 100$   
 charcoal, depth 1.08 m                                     $\delta^{13}\text{C} = -27.5\text{\%}$

**Site 74 Series**

x = 7699 37, y = 527 27; 210 m a.s.l.

Series comment (MK): A series of 3 charcoal horizons.

**Hel-3432 Sample 74/3**                                     $1620 \pm 90$   
 charcoal, depth 0.50 m                                     $\delta^{13}\text{C} = -26.1\text{\%}$

**Hel-3433 Sample 74/2**                                     $2880 \pm 80$   
 charcoal, depth 0.60 m                                     $\delta^{13}\text{C} = -25.9\text{\%}$

**Hel-3434 Sample 74/1**                     $3710 \pm 130$   
 charcoal, depth 0.80 m                     $\delta^{13}\text{C} = -26.0\text{\textperthousand}$

**Site 75 Series**

x = 7700 45, y = 528 95; 200 m a.s.l.

Series comment (MK): A series of 2 charcoal horizons.

**Hel-3435 Sample 75/1**                     $1030 \pm 80$   
 charcoal, depth 1.0 m                     $\delta^{13}\text{C} = -26.7\text{\textperthousand}$

**Hel-3436 Sample 75/2**                     $4970 \pm 100$   
 charcoal, depth 1.20 m                     $\delta^{13}\text{C} = -26.8\text{\textperthousand}$

**LATOKANGAS SERIES, YLIKIIIMINKI**

64°05'N, 26°11'E

Coll.1988 by M. Sarkkinen and K. Mäkivuoti, subm. 1990 by M. Mäkivuoti.

General comment (MM): The results are in conflict with the artefactual dating (Stone Age, Sär 1-phase), except Hel-3059.

Ref. Mäkivuoti (1991).

**Hel-3020 Sample 1 12/88**                     $1770 \pm 80$   
 77 m a.s.l.                                 $\delta^{13}\text{C} = -24.6\text{\textperthousand}$   
 charcoal, depth 0.45 m

**Hel-3021 Sample 2 10/89**                     $3950 \pm 100$   
 74 m a.s.l.                                 $\delta^{13}\text{C} = -24.6\text{\textperthousand}$   
 charcoal, depth 0.30 m

**Hel-3022 Sample 3 6/89**                     $3680 \pm 120$   
 74 m a.s.l.                                 $\delta^{13}\text{C} = -25.2\text{\textperthousand}$   
 charcoal, depth 0.90 m

**Hel-3023 Sample 4 8/89**                     $4650 \pm 80$   
 74 m a.s.l.                                 $\delta^{13}\text{C} = -24.1\text{\textperthousand}$   
 charcoal, depth 0.25 m

**Hel-3024 Sample 5 12/89**                     $4030 \pm 90$   
 73-74 m a.s.l.                             $\delta^{13}\text{C} = -23.0\text{\textperthousand}$   
 charcoal, depth 0.60 m

**Hel-3059 Sample 1 YL-90**                     $5410 \pm 110$   
 74m a.s.l.                                 $\delta^{13}\text{C} = -24.8\text{\textperthousand}$   
 charcoal, depth 0.40 m

## JOKKAVAARA SERIES, ROVANIEMI

66°27'N, 26°04'E; 86-87 m a.s.l.

Coll. and subm. 1990 by M. Tusa.

General comment (P.Hamari): Charcoal from hearths on a dwelling site. The datings are in accordance with the archaeological material showing SÄR-1 period settlement on the site.

<b>Hel-3025 ROI 340 C/Sample 1</b>	$5930 \pm 150$
charcoal, depth 0.30 m	$\delta^{13}\text{C} = -24.0\text{\textperthousand}$
<b>Hel-3026 ROI 340 C/Sample 2</b>	$6200 \pm 110$
charcoal, depth 0.53 m	$\delta^{13}\text{C} = -23.4\text{\textperthousand}$
<b>Hel-3027 ROI 340 C/Sample 52</b>	$5620 \pm 130$
charcoal, depth 0.30 m	$\delta^{13}\text{C} = -25.7\text{\textperthousand}$
Comment (P.Hamari): Sample from a hearth which was covered by layers of sterile sand.	
<b>Hel-3028 ROI 340 C/Sample 53</b>	$5650 \pm 140$
charcoal, depth 0.34 m	$\delta^{13}\text{C} = -26.0\text{\textperthousand}$
<b>Hel-3029 ROI 340 C/Sample 54</b>	$5940 \pm 100$
charcoal, depth 0.40 m	$\delta^{13}\text{C} = -25.4\text{\textperthousand}$
<b>Hel-3030 ROI 340 C/Sample 55</b>	$5660 \pm 130$
charcoal, depth 0.40 m	$\delta^{13}\text{C} = -25.2\text{\textperthousand}$

## PIRITTÄVAARA SERIES, ROVANIEMI

66°30'N, 25°45'E

Coll. and subm. 1990 by M. Lavento.

<b>Hel-3031 Sample 30</b>	$4630 \pm 120$
78.70 m a.s.l.	$\delta^{13}\text{C} = -25.5\text{\textperthousand}$
charcoal, depth 0.25 m	
<b>Hel-3032 Sample 9</b>	$4900 \pm 120$
78.10 m a.s.l.	$\delta^{13}\text{C} = -24.9\text{\textperthousand}$
charcoal, depth 0.30 m	

## Hel-3033 KOPPELONIEMI, HYRYNSALMI

64°42'N, 28°30'E; 161.50-161.55 m a.s.l.

Coll. and subm. 1990 by T. Rostedt.

KM 25883:952

charcoal from a fireplace, depth 0.92-1.07 m

$8440 \pm 130$   
 $\delta^{13}\text{C} = -25.1\text{\textperthousand}$

Comment (TR): A dwelling site with occupation periods from Mesolithic to Neolithic Stone Age. The C-14 dating is in agreement with archaeological finds and field observations.

Ref. Huurre (1992).

### **SUOMUSSALMI SERIES, SUOMUSSALMI**

64°53'N, 28°57'E (Hel-3034-3035); 199-200 m a.s.l.

65°12'N, 29°26'E (Hel-3231-3233); 199-200 m a.s.l.

Coll. 1989 and subm. 1990 by P. Kontio.

**Hel-3034 Vanha Kirkkosaari, KM 24729:656**       $6680 \pm 140$   
 charcoal, depth 0.32 m       $\delta^{13}\text{C} = -24.7\text{\textperthousand}$

Comment (P.Hamari): Sample from a refuse pit with over 3 kg of elk/reindeer bones.

**Hel-3035 Vanha Kirkkosaari, KM 24729:658**       $8200 \pm 130$   
 charcoal, depth 0.50 m       $\delta^{13}\text{C} = -25.8\text{\textperthousand}$

Comment (P.Hamari): Sample from a hearth on a dwelling site.

**Hel-3231 Mikonsärkkä, KM 26391:130**       $3100 \pm 110$   
 charcoal, depth 0.62 m       $\delta^{13}\text{C} = -25.5\text{\textperthousand}$

Comment (P.Hamari): Sample from a hearth on a dwelling site.  
 The dating is in agreement with the archaeological finds.

**Hel-3232 Salmenniemi, KM 26392:15**       $2130 \pm 100$   
 charcoal, depth 0.10 m       $\delta^{13}\text{C} = -25.7\text{\textperthousand}$

Comment (P.Hamari): Sample from a hearth on a dwelling site.

**Hel-3233 Mikonsärkkä, KM 26391:125**       $1490 \pm 120$   
 charcoal, depth 0.15 m       $\delta^{13}\text{C} = -24.9\text{\textperthousand}$

Comment (P.Hamari): Sample from a concentration of SÄR-2 ceramic sherds beside the hearth Hel-3231. The dating is younger than expected.

**Hel-3036 MORGAM, LEMMENJOKI**       $2980 \pm 140$   
 $\delta^{13}\text{C} = -28.7\text{\textperthousand}$

68°41'N, 25°48'E

x = 76216 50, y = 4509 00; 340 m a.s.l.

soil, depth 0.30-0.40 m

Coll. by L. Forsström.

Comment (LF): A soil horizon buried under diamicton.

### **TORVSTRÖMOSSEN SERIES, SIUNTIO**

x = 6674 92, y = 2508 90; 68-70 m a.s.l.

Coll. 1989 by K. Tolonen and M. Tolonen, subm. 1990 by M. Tolonen.

<b>Hel-3037 Suit I</b>	$110 \pm 100$
peat, depth 0.320-0.345 m	$\delta^{13}\text{C} = -25.7\text{\textperthousand}$

<b>Hel-3058</b>	<b>MEIJERINKANGAS, PIELAVESI</b>	$4880 \pm 100$
	63°06'N, 26°39'E; 105 m a.s.l. Coll. and subm. 1990 by P. Kankunen. charcoal, depth 0.60 m	$\delta^{13}\text{C} = -24.3\%$
<b>Hel-3059</b>	See LATOKANGAS SERIES Hel-3020.	

**Hel-3060 KANKAANLAITA, KERIMÄKI**       $4970 \pm 110$   
 $\delta^{13}\text{C} = -24.1\text{\textperthousand}$

61°59'N, 29°13'E; 82.84 m a.s.l.  
 Coll. and subm. 1990 by J. Moisanen.  
 charcoal, depth 0.60 m

Comment (JM): The sample was collected from inside of a ceramic pot *in situ*.  
 The dating is in accordance with the archaeological material from the site.  
 Ref. Moisanen (1991).

**Hel-3061 SUTARKULLA, KARJAA**       $600 \pm 80$   
 $\delta^{13}\text{C} = -23.9\text{\textperthousand}$

Coll. and subm. by L. Nyberg.  
 charcoal

**Hel-3062** See LAKE POHJOINEN HAUKIJÄRVI SERIES Hel-2954.

**Hel-3063 - Hel-3066** See VARIKKONIEMI SERIES Hel-2856.

#### HATTELMALA SERIES, HÄMEENLINNA

60°58'N, 24°28'E; 105 m a.s.l.  
 Coll. and subm. 1990 by E-L. Schulz.

General comment: The sample was collected from an Iron Age dwelling site, which was inhabited from ca the 2nd to the 11th century.

**Hel-3067 Sample 1: 139/92 KS 2**       $1850 \pm 100$   
 charcoal from a hearth in level II, depth 0.65-0.70 m       $\delta^{13}\text{C} = -24.5\text{\textperthousand}$

**Hel-3068 Sample 2: 139/92-93 KS 3**       $1790 \pm 100$   
 charcoal from a hearth, depth 0.70-0.75 m       $\delta^{13}\text{C} = -24.2\text{\textperthousand}$

**Hel-3069 Sample 3: 133/92 KS**       $790 \pm 110$   
 charcoal from a ditch, depth 0.80 m       $\delta^{13}\text{C} = -24.2\text{\textperthousand}$

**Hel-3070 Sample 4: 130/92 KS**       $1160 \pm 110$   
 charcoal from a ditch, depth 0.80 m       $\delta^{13}\text{C} = -23.1\text{\textperthousand}$

**Hel-3071** See VARIKKONIEMI SERIES Hel-2856.

**Hel-3072 - Hel-3079** See ÅLAND CHURCHES SERIES (Eckerö) Hel-2937.

**Hel-3080 HÄRKÖSÄRKKÄ, KUHMO**
 $1440 \pm 100$   
 $\delta^{13}\text{C} = -26.4\%$ 

64°09'N, 29°18'E; 159.92-160.02 m a.s.l.  
 Coll. and subm. 1990 by V. Laulumaa.  
 charcoal, depth 0.25-0.35 m

**KULTISALMI SERIES, RANUA**

66°06'N, 27°07'E; 177,5 m a.s.l.  
 Coll. and subm. 1990 by K. Katiskoski.

**Hel-3081 Stone Age settlement/Sample 1**  
 charcoal, depth 0.15 m

 $2600 \pm 80$   
 $\delta^{13}\text{C} = -25.4\%$ 

**Hel-3082 Stone Age settlement/Sample 2**  
 charcoal, depth 0.15-0.20 m

 $1760 \pm 100$   
 $\delta^{13}\text{C} = -23.9\%$ 

**Hel-3083 Stone Age settlement/Sample 3**  
 charcoal, depth 0.85 m

 $1570 \pm 90$   
 $\delta^{13}\text{C} = -26.5\%$ 

**Hel-3084 Stone Age settlement/Sample 4**  
 charcoal, depth 0.95 m

 $1650 \pm 100$   
 $\delta^{13}\text{C} = -24.9\%$ 

66°05'N, 27°07'E; 177 m a.s.l.  
 Coll. and subm. 1991 by K. Katiskoski.

**Hel-3182 Sample 1**  
 charcoal, depth 0.40 m

 $7320 \pm 140$   
 $\delta^{13}\text{C} = -24.7\%$ 

**Hel-3183 Sample 6**  
 charcoal, depth 0.30 m

 $1090 \pm 110$   
 $\delta^{13}\text{C} = -25.5\%$ 
**RIKALA SERIES, KIHINEN, HALIKKO**

60°20'N, 23°10'E  
 $x = 6698\ 74, y = 448\ 18$ , 27.5 m a.s.l.  
 Coll. and subm. 1990 by E. Saloranta.  
 General comment (ES): The samples were taken from an Iron Age dwelling site with traces of post holes and wall construction. In the site there were also indications of later activities which had broken the Iron Age remain.

**Hel-3085 510/270 A**  
 charcoal, depth 0.30 m

 $510 \pm 110$   
 $\delta^{13}\text{C} = -23.9\%$ 

**Hel-3086 510/276 A**  
 charcoal, depth 0.27 m

 $1620 \pm 120$   
 $\delta^{13}\text{C} = -21.9\%$

## SAAMEN MUSEO 73 SERIES, ENONTEKIÖ

68°24'N, 23°42'E

Coll. and subm. 1990 by J. Kankaanpää.

General comment (JK): The location is a small multi-component campsite situated on a sandy lake shore. The finds suggest the presence of at least Stone Age, Epineolithic, and Early Iron Age occupations.

**Hel-3087 KM 25690:259-4**                                     $4190 \pm 120$   
 288.5 m a.s.l.     $\delta^{13}\text{C} = -25.9\text{\%}$

charcoal, depth 0.02-0.08 m

Comment (JK): Wood charcoal from a small stone hearth associated with quartz flakes and implements. The Late Stone Age date falls within the expected range.

**Hel-3088 KM 25690:259-15**                                     $1930 \pm 100$   
 288.15 m a.s.l.     $\delta^{13}\text{C} = -26.4\text{\%}$

charcoal, depth 0.35 m

Comment (JK): The sample derives from a stone-lined pit containing a large quantity of charcoal and sherds of Kjelmøy-type asbestos-tempered pottery. The Early Iron Age date fits well with the finds.

**Hel-3089 KM 25690:259-17**                                     $700 \pm 100$   
 228.45 m a.s.l.     $\delta^{13}\text{C} = -25.4\text{\%}$

charcoal, depth 0.20 m

Comment (JK): Material from the bottom of a small pit of unknown function. There were no typologically datable finds or features.

**Hel-3090 KM 25690:259-23**                                     $3290 \pm 130$   
 288.38 m a.s.l.     $\delta^{13}\text{C} = -25.2\text{\%}$

charcoal, depth 0.08-0.13 m

Comment (JK): Charcoal from a small stone hearth associated with a number of quartzite flakes and implements, and with several straight-based arrow-heads of quartz and quartzite. The finds suggest an Epineolithic date, as does the radiocarbon age.

**Hel-3091** See ÅLAND CHURCHES SERIES (Hammarland) Hel-2937

**Hel-3092** See ÅLAND CHURCHES SERIES (Jomala) Hel-2937

**Hel-3093 AULANKO, HÄMEENLINNA**                                     $2020 \pm 110$   
      $\delta^{13}\text{C} = -23.7\text{\%}$

61°01'N, 24°27'E; 89 m a.s.l.

Coll. and subm. 1990 by M. Tusa.

charcoal from a hearth, depth 0.65 m, sample 3 from the third stone layer

Comment (P.Hamari): The finds indicate a Late Iron Age occupation on the site.

## PAPPILA SERIES, KEHO, NOKIA

61°27'N, 23°30'E; 86 m a.s.l.  
 $x = 6815\ 96$ ,  $y = 2473\ 48$ ; 86 m a.s.l.  
 Coll. and subm. 1991 by U. Rajala.

General comment (UR): Both samples are from the Iron Age burial mound of earth and stone. The dates given by C-14 analysis are slightly earlier than the earliest date hinted by the burial goods. The artefacts from the excavation area are from the Merovingian period (550 - 800 AD).

<b>Hel-3094 TYA 586:611 (C11)</b>	$1470 \pm 100$
$x=6815\ 96$ , $y=2473\ 48$	$\delta^{13}\text{C} = -23.1\text{\textperthousand}$
charcoal, depth 0.55 m	
<b>Hel-3095 TYA 586:615 (C15)</b>	$1530 \pm 100$
charcoal, depth 0.23 m	$\delta^{13}\text{C} = -24.5\text{\textperthousand}$

## LAKKASUO FEN SERIES, ORIVESI

61°47'N, 24°19'E; 150 m a.s.l.  
 Coll. and subm. 1991 by K. Tolonen.

General comment (KT): Datings Hel-3096 - 3098 are from the virgin sedge fen site (25 m) of the study transect number 1 of the "Suosilmu" research programme. The samples are from a long profile and used in carbon accumulation calculations in Tolonen and Turunen (1996) and Laine *et al.* (1996).

<b>Hel-3096 LA I/Sample 1</b>	$2280 \pm 120$
peat, depth 1.00-1.05 m	$\delta^{13}\text{C} = -29.0\text{\textperthousand}$
<b>Hel-3097 LA I/Sample 2</b>	$1940 \pm 100$

**SAAMEN MUSEO 13 SERIES, INARI**

68°54'N, 27°01'E

Coll. and subm. 1991 by S-L. Seppälä.

General comment (S-L S): Samples Hel-3123-3124 are taken from a concentration of burnt bones (Mesolithic) and Hel-3317 from a concentration of burnt bones and quartz. The dates of this Series are as expected according to the archaeological evidence with the exception of Hel-3122 and Hel-3316-3317 which are younger than expected.

Ref. Arponen and Hintikainen (1995).

<b>Hel-3121 Sample 1/Hearth 1</b> 126.70 m a.s.l. charcoal (Iron Age finds), depth 0.15 m	$1230 \pm 100$ $\delta^{13}\text{C} = -26.0\text{\textperthousand}$
<b>Hel-3122 Sample 5/Hearth 1</b> 126.70 m a.s.l. charcoal (surface layer), depth 0.20-0.30 m	$330 \pm 130$ $\delta^{13}\text{C} = -25.6\text{\textperthousand}$
<b>Hel-3123 Sample 3</b> 126.43 m a.s.l. charcoal, depth 0.35 m	$6920 \pm 130$ $\delta^{13}\text{C} = -26.3\text{\textperthousand}$
<b>Hel-3124 Sample 4</b> 126.58 m a.s.l. charcoal, depth 0.25 m	$6870 \pm 150$ $\delta^{13}\text{C} = -26.9\text{\textperthousand}$
<b>Hel-3314 Sample 1/Hearth 1</b> 122.8 m a.s.l. charcoal, depth 0.30 m	$4780 \pm 120$ $\delta^{13}\text{C} = -25.9\text{\textperthousand}$

<b>Hel-3315 Sample 2/Hearth 2</b>	$6760 \pm 150$
125 m a.s.l.	$\delta^{13}\text{C} = -27.4\text{\textperthousand}$
charcoal, depth 0.30 m	
<b>Hel-3316 Sample 3/Hearth 3</b>	$1480 \pm 100$
124.9 m a.s.l.	$\delta^{13}\text{C} = -25.7\text{\textperthousand}$
charcoal, depth 0.30 m

125.5 m a.s.l.	$\delta^{13}\text{C} = -25.3\text{\textperthousand}$
charcoal, depth 0.35 m	

### BERGVALLA SERIES, KARJAA

60°02'N, 23°38'E

Coll. and subm. 1991 and 1992 by J. Moisanen.

General comment (JM): The samples were collected from a pit hearth. The archaeological material found close to the hearth is dating to the Late Stone Age which has good correlation with the shore displacement. The Roman Iron Age dating of the hearth connects it with the Iron Age findings from the nearby area.

Ref. Forsén and Moisanen (1995).

<b>Hel-3125 Sample 6/Hearth 1</b>	$1710 \pm 100$
17.23-17.30 m a.s.l.	$\delta^{13}\text{C} = -22.5\text{\textperthousand}$
charcoal, depth 0.72 m	
<b>Hel-3312 Sample 2/Hearth 1 KM:27027:46</b>	$1690 \pm 100$
19.36 m a.s.l.	$\delta^{13}\text{C} = -25.1\text{\textperthousand}$
charcoal, depth 0.50 m	

### VUORISALMI SERIES, HYRYNSALMI

64°43'N, 28°35'E

Coll. and subm. 1991 by T. Rostedt.

General comment (TR): Dwelling site with several occupation periods from Stone Age to Iron age. The C14 dating is in agreement with finds and field observations.

<b>Hel-3126 Sample 1 KM 26608:872</b>	$1040 \pm 100$
158.80 m a.s.l.	$\delta^{13}\text{C} = -26.9\text{\textperthousand}$
charcoal from fireplace 3, depth 0.40 m	
<b>Hel-3127 Sample 2 KM 26608:873</b>	$1940 \pm 110$
158.48 m a.s.l.	$\delta^{13}\text{C} = -26.2\text{\textperthousand}$
charcoal from fireplace 1, depth 0.23 m	

### LAKKASUO S SERIES, ORIVESI

61°47'N, 24°19'E; 156.6, m a.s.l.  
Coll. and subm. 1992 by K. Tolonen.

General comment (KT): Samples Hel-3128 - 3132 and Hel-3168 - 3170 are subsampled from a long core obtained from the hollow-ridge complex in the south-western part of Lakkasuo mire (Geological survey of Finland transect A 200 m). Together with two earlier near bottom datings from the same site (Laine *et al.* 1986), the datings were used for carbon accumulation calculations.

Ref. Tolonen and Turunen (1996), Laine *et al.* (1996).

<b>Hel-3128 LA III/Sample 1</b>	<b>modern</b>
peat, depth 0.45-0.50 m	$\delta^{13}\text{C} = -24.8\text{\textperthousand}$
<b>Hel-3129 LA III/Sample 2</b>	$840 \pm 100$
peat, depth 0.70-0.80 m	$\delta^{13}\text{C} = -25.9\text{\textperthousand}$
<b>Hel-3130 LA III/Sample 3</b>	$2620 \pm 140$
peat, depth 1.20-1.30 m	$\delta^{13}\text{C} = -25.9\text{\textperthousand}$
<b>Hel-3131 LA III/Sample 4</b>	$3150 \pm 100$
peat, depth 1.70-1.80 m	$\delta^{13}\text{C} = -25.6\text{\textperthousand}$
<b>Hel-3132 LA III/Sample 5</b>	$3870 \pm 100$
peat, depth 2.20-2.30 m	$\delta^{13}\text{C} = -25.2\text{\textperthousand}$
<b>Hel-3168 LA III/Sample 6</b>	$1410 \pm 110$
peat, depth 0.90-1.00 m	$\delta^{13}\text{C} = -25.9\text{\textperthousand}$
<b>Hel-3169 LA III/Sample 7</b>	$2840 \pm 130$
peat, depth 1.90-2.00 m	$\delta^{13}\text{C} = -26.2\text{\textperthousand}$
<b>Hel-3170 LA III/Sample 8</b>	$3480 \pm 110$
peat, depth 2.50-2.60 m	$\delta^{13}\text{C} = -26.0\text{\textperthousand}$

## KORVINSUO LAGG SERIES, ILOMANTSII

62°46'N, 30°56'E; 147 m a.s.l.

Coll. 1991 by K. Tolonen and J. Silvola, subm. by K. Tolonen.

General comment (KT): Hel-3133 - 3136 are from a long core sampled from the marginal lagg fen about 40 m south of Korvinsuo 1. The dates are stratigraphically consistent (Tolonen and Turunen 1996).

<b>Hel-3133 KOLA 50-55</b>	$1320 \pm 110$
peat, depth 0.50-0.55 m	$\delta^{13}\text{C} = -29.2\text{\%}$
<b>Hel-3134 KOLA 80-85</b>	$2590 \pm 100$
peat, depth 0.80-0.85 m	$\delta^{13}\text{C} = -28.9\text{\%}$
<b>Hel-3135 KOLA 100-105</b>	$3770 \pm 110$
peat, depth 1.00-1.05 m	$\delta^{13}\text{C} = -29.1\text{\%}$
<b>Hel-3136 KOLA 140-146,5</b>	$5080 \pm 130$
peat, depth 1.40-1.465 m	$\delta^{13}\text{C} = -28.7\text{\%}$

## Hel-3137 SEWN BOAT, SIPOO

modern  
 $\delta^{13}\text{C} = -22.0\text{\%}$

Coll. 1991 by L. Sammallahti, subm. by M. Pelanne.  
 wood from a sewn boat, depth 7.0 m

## KORVINSUO 5 SERIES, ILOMANTSII

62°46'N, 30°56'E; 147 m a.s.l.

Coll. and subm. 1991 by K. Tolonen.

General comment (KT): Hel-3138 - 3146 and Hel-3194 - 3197 are from a hummock ridge (kermi) long core obtained in the wettest middle part of the bog. Eleven top most dates are stratigraphically consistent, but the remaining two are much younger than expected. New datings were carried out in the Svedberg laboratory (Uppsala, Sweden) by Dr. G. Possnert by AMS from *Menyanthes* seeds and brown moss (*Scorpidium*) shoots subsampled from three levels within the bottom most 80 cm section of the profile. These datings were stratigraphically consistent, the bottom most one being about 1000 years older than Hel-3138 which was from the same stratigraphical level. The obvious reason for the "too young" datings by the conventional method was the high content of deep penetrating below ground parts of reeds and horsetails in the bulk samples.

Carbon accumulation figures treated in (Tolonen and Turunen 1996).

<b>Hel-3138 KOR 5/Sample 1</b>	$8180 \pm 90$
peat, depth 4.45-4.50 m	$\delta^{13}\text{C} = -26.8\text{\%}$
<b>Hel-3139 KOR 5/Sample 2</b>	$8370 \pm 170$
peat, depth 4.15-4.20 m	$\delta^{13}\text{C} = -27.2\text{\%}$

<b>Hel-3140 KOR 5/Sample 3</b>	$8490 \pm 120$
peat, depth 3.75-3.80 m	$\delta^{13}\text{C} = -25.8\text{\%}$
<b>Hel-3141 KOR 5/Sample 4</b>	$8160 \pm 150$
peat, depth 3.45-3.50 m	$\delta^{13}\text{C} = -25.6\text{\%}$
<b>Hel-3142 KOR 5/Sample 5</b>	$5670 \pm 130$
peat, depth 3.00-3.05 m	$\delta^{13}\text{C} = -26.6\text{\%}$
<b>Hel-3143 KOR 5/Sample 6</b>	$4700 \pm 130$
peat, depth 2.40-2.46 m	$\delta^{13}\text{C} = -26.4\text{\%}$
<b>Hel-3144 KOR 5/Sample 7</b>	$3290 \pm 130$
peat, depth 1.90-1.95 m	$\delta^{13}\text{C} = -25.7\text{\%}$
<b>Hel-3145 KOR 5/Sample 8</b>	$1560 \pm 110$
peat, depth 1.20-1.27 m	$\delta^{13}\text{C} = -25.9\text{\%}$
<b>Hel-3146 KOR 5/Sample 9</b>	$970 \pm 130$
peat, depth 0.90-1.00 m	$\delta^{13}\text{C} = -26.1\text{\%}$
<b>Hel-3194 KOR 5/Sample 10</b>	modern
peat, depth 0.65-0.75 m	$\delta^{13}\text{C} = -25.3\text{\%}$
<b>Hel-3195 KOR 5/Sample 11</b>	$1550 \pm 90$
peat, depth 1.38-1.52 m	$\delta^{13}\text{C} = -27.1\text{\%}$
<b>Hel-3196 KOR 5/Sample 12</b>	$3400 \pm 120$
peat, depth 2.20-2.30 m	$\delta^{13}\text{C} = -24.7\text{\%}$
<b>Hel-3197 KOR 5/Sample 13</b>	$4970 \pm 90$
peat, depth 2.70-2.80 m	$\delta^{13}\text{C} = -26.1\text{\%}$

### AHVENSALONSUO SERIES, ILOMANTSII

62°51'N, 30°53'E; 155 m a.s.l.

Coll. 1991 by K. Tolonen and J. Silvola, subm. by K. Tolonen.

General comment (KT): Hel-3147 - 3152 and Hel-3198 - 3201 were subsampled from a long core obtained from a drained spruce rich pine fen. The dates, except Hel-3201 that seems to be "too young" for some unknown reason, are stratigraphically consistent and they were applied in the calculation of the "true rate" of peat accumulation by means of Clymo's (1984) model (Tolonen and Turunen 1996).

<b>Hel-3147 Ahv 1/Sample 1</b>	$8630 \pm 160$
peat, depth 1.94-2.04 m	$\delta^{13}\text{C} = -28.8\text{\%}$

<b>Hel-3148 Ahv 1/Sample 2</b>	$7370 \pm 110$
peat, depth 1.65-1.70 m	$\delta^{13}\text{C} = -29.1\text{\textperthousand}$
<b>Hel-3149 Ahv 1/Sample 3</b>	$4630 \pm 110$
peat, depth 1.45-1.50 m	$\delta^{13}\text{C} = -28.6\text{\textperthousand}$
<b>Hel-3150 Ahv 1/Sample 4</b>	$3380 \pm 80$
peat, depth 0.95-1.00 m	$\delta^{13}\text{C} = -28.9\text{\textperthousand}$
<b>Hel-3151 Ahv 1/Sample 5</b>	$1430 \pm 90$
peat, depth 0.50-0.55 m	$\delta^{13}\text{C} = -27.2\text{\textperthousand}$
<b>Hel-3152 Ahv 1/Sample 6</b>	$410 \pm 80$
peat, depth 0.30-0.35	$\delta^{13}\text{C} = -27.7\text{\textperthousand}$
<b>Hel-3198 Ahv 1/Sample 7</b>	$1870 \pm 80$
peat, depth 0.70-0.75 m	$\delta^{13}\text{C} = -27.3\text{\textperthousand}$
<b>Hel-3199 Ahv 1/Sample 8</b>	$3450 \pm 100$
peat, depth 1.20-1.25 m	$\delta^{13}\text{C} = -29.1\text{\textperthousand}$
<b>Hel-3200 Ahv 1/Sample 9</b>	$3910 \pm 100$
peat, depth 1.30-1.35 m	$\delta^{13}\text{C} = -28.4\text{\textperthousand}$
<b>Hel-3201 Ahv 1/Sample 10</b>	$6460 \pm 120$
peat, depth 1.80-1.85 m	$\delta^{13}\text{C} = -28.6\text{\textperthousand}$

### KORVINSUO 1 SERIES, ILOMANTSI

62°46'N, 30°56'E; 147 m a.s.l.

Coll. 1991 by K. Tolonen and J. Silvola, subm. by K. Tolonen.

General comment (KT): Hel-3153 - 3159 have been subsampled from a long core obtained from the tall shrub pine bog (IR) site on the marginal slope of this raised bog. The dates are stratigraphically consistent and applied in the calculation of the "true rate" of carbon calculation by means of Clymo's (1984) model (Tolonen and Turunen 1996).

<b>Hel-3153 KO IR/Sample 1</b>	$9180 \pm 100$
peat, depth 2.75-2.80 m	$\delta^{13}\text{C} = -28.7\text{\textperthousand}$
<b>Hel-3154 KO IR/Sample 2</b>	$7430 \pm 100$
peat, depth 2.25-2.30 m	$\delta^{13}\text{C} = -27.7\text{\textperthousand}$
<b>Hel-3155 KO IR/Sample 3</b>	$4980 \pm 140$
peat, depth 1.75-1.80 m	$\delta^{13}\text{C} = -28.3\text{\textperthousand}$
<b>Hel-3156 KO IR/Sample 4</b>	$3290 \pm 120$
peat, depth 1.25-1.30 m	$\delta^{13}\text{C} = -26.4\text{\textperthousand}$

<b>Hel-3157 KO IR/Sample 5</b>	$2330 \pm 130$
peat, depth 1.05-1.10 m	$\delta^{13}\text{C} = -26.6\text{\%}$
<b>Hel-3158 KO IR/Sample 6</b>	$1680 \pm 110$
peat, depth 0.80-0.85 m	$\delta^{13}\text{C} = -26.5\text{\%}$
<b>Hel-3159 KO IR/Sample 7</b>	$940 \pm 100$
peat, depth 0.60-0.65 m	$\delta^{13}\text{C} = -25.1\text{\%}$

### SUOTNIEMI SERIES, KÄKISALMI, RUSSIA

61°02'N, 30°00'E; 15 m a.s.l.

Coll. 1991 by P. Uino and A.I. Saksa, subm. by P. Uino.

General comment (PU): The samples are from hearths in the near vicinity of the Suotniemi inhumation cemetery (AD 1100-1300) excavated in 1885. The radiocarbon dates indicate older Iron Age activity at the site.

<b>Hel-3160 Sample 1</b>	$1180 \pm 100$
charcoal, depth 0.40 m	$\delta^{13}\text{C} = -24.3\text{\%}$
<b>Hel-3161 Sample 2</b>	$1070 \pm 90$
charcoal, depth 0.50-0.70 m	$\delta^{13}\text{C} = -26.1\text{\%}$

### JIERSTIVAARA SERIES, ENONTEKIÖ

68°40'N, 23°44'E; 456 m a.s.l.

Coll. 1991 by M. Eronen and H. Hyvärinen, subm. 1992 by H. Hyvärinen.

General comment (HH): A pollen stratigraphical site used for the reconstruction of the Holocene forest history and tree line changes in northern Fennoscandia. The dates are stratigraphically consistent. In accordance with the radiocarbon evidence from several other lakes in Finnish Lapland, a clear acceleration in the rate of sedimentation occurs between ca 5000 and 4000 years ago which is believed to reflect a change towards increased climatic humidity.

Ref. Hyvärinen and Alhonen (1994), Mäkelä *et al.* (1994), Hyvärinen and Mäkelä (1996).

<b>Hel-3162 Sample 1/JRS</b>	$7630 \pm 150$
gyttja, depth 2.85-2.95 m	$\delta^{13}\text{C} = -23.6\text{\%}$
<b>Hel-3163 Sample 6/JRS</b>	$6320 \pm 160$
gyttja, depth 2.60-2.75 m	$\delta^{13}\text{C} = -28.2\text{\%}$
<b>Hel-3164 Sample 2/JRS</b>	$5270 \pm 140$
gyttja, depth 2.35-2.50 m	$\delta^{13}\text{C} = -28.9\text{\%}$

<b>Hel-3165 Sample 3/JRS</b>	$3250 \pm 130$
gyttja, depth 1.75-1.90 m	$\delta^{13}\text{C} = -26.9\text{\textperthousand}$
<b>Hel-3166 Sample 4/JRS</b>	$1510 \pm 130$
gyttja, depth 1.10-1.25 m	$\delta^{13}\text{C} = -26.3\text{\textperthousand}$
<b>Hel-3167 Sample 5/JRS</b>	$1220 \pm 120$
gyttja, depth 0.50-0.65 m	$\delta^{13}\text{C} = -25.3\text{\textperthousand}$

### YLIKYLÄ SERIES, ROVANIEMI

66°31'N, 25°40'E; 100 m a.s.l.

Coll. 1991 and subm. 1992 by S. Hicks.

General comment (SH): Pollen was analysed from a peat profile taken from a mire some 400 m to the SW of the village Ylikylä in order to assess the settlement history of the area. The dated horizons (Hel-3171 and Hel-3172) refer to the first, probably seasonal settlement associated with fishing, and the commencement of more permanent settlement associated with agriculture, respectively.

Ref. Hicks (1994, 1996).

<b>Hel-3171 Sample A</b>	$800 \pm 100$
peat, depth 0.11-0.17 m	$\delta^{13}\text{C} = -28.5\text{\textperthousand}$
<b>Hel-3172 Sample B</b>	$2460 \pm 110$
peat, depth 0.22-0.27 m	$\delta^{13}\text{C} = -28.4\text{\textperthousand}$

### SIERIJÄRVI 469 SERIES, ROVANIEMI

66°28'N, 25°56'E; 84.60-84.45 m a.s.l.

Coll. 1991 and subm. 1992 by H. Kotivuori.

General comment (HK): Samples collected for dating from a Stone Age/Early Iron Age dwelling site and an iron production oven found in excavation. Sample 1 dates one of the soot pits, sample 2 an iron smelting oven.

Ref. Kotivuori (1996).

<b>Hel-3173 Sample 1</b>	$1880 \pm 110$
charcoal, depth 0.10-0.25 m	$\delta^{13}\text{C} = -25.0\text{\textperthousand}$
<b>Hel-3174 Sample 2</b>	$2040 \pm 100$

peat, depth 2.00-2.10 m	$\delta^{13}\text{C} = -25.1\text{\%}$
<b>Hel-3221 Sample 5</b>	$2650 \pm 90$
peat, depth 2.50-2.55 m	$\delta^{13}\text{C} = -28.2\text{\%}$

**PÖRRINMÖKKI 1 SERIES, RÄÄKKYLÄ**

62°11'N, 29°54'E

Coll. and subm. 1991 by M. Lavento.

<b>Hel-3222 Sample 1/Hearth 1</b>	$5270 \pm 100$
charcoal, depth 0.25 m, 84 m a.s.l.	$\delta^{13}\text{C} = -26.0\text{\%}$
<b>Hel-3223 Sample 2/Hearth 1</b>	$5090 \pm 100$
charcoal, depth 0.35 m, 84 m a.s.l.	$\delta^{13}\text{C} = -25.7\text{\%}$
<b>Hel-3224 Sample 3</b>	$5640 \pm 100$
charcoal, depth 0.40 m, 84 m a.s.l.	$\delta^{13}\text{C} = -25.7\text{\%}$
<b>Hel-3225 Sample 4/Hearth 799/480</b>	$490 \pm 100$
charcoal, depth 0.30 m, 82 m a.s.l.	$\delta^{13}\text{C} = -25.4\text{\%}$
<b>Hel-3226 JÖNSAS, MYYRMÄKI, VANTAA</b>	$6460 \pm 130$
60°15'N, 24°51'E; 34.75 m a.s.l.	$\delta^{13}\text{C} = -24.9\text{\%}$

Coll. and subm. 1991 by L. Ruonavaara.

charcoal, hearth 673706, depth 0.50-0.60 m

Comment (LR): The dating supports the assumption based on archaeological observations that the hearth and the small grave next to it were connected. They

were both covered by a layer of red ochre. Some fragments of hazelnut shells (*Corylus avellana*), the oldest so far in Finland, were found in the hearth. Hearths adjoining graves is a phenomenon also known from some Early (Simo Tainiaro) and Late (Laitila Nästiristi) Comb Ceramic connections.

Ref. Purhonen and Ruonavaara (1994), Viikkula (1987).

#### **Hel-3227 PISPA, KOKEMÄKI**

$2000 \pm 110$   
 $\delta^{13}\text{C} = -26.3\text{\textperthousand}$

61°16'N, 22°24'E; 45.5. m a.s.l.

Coll. and subm. 1991 by L. Ruonavaara.

charcoal, depth 0.80 m

Comment (LR): The dating of the large pit hearth to Early Iron Age is in accordance with the datings of similar hearths from for example Vantaa Jönsas and Kruunupy Borgbacken and shows that the type has been used during Bronze and Early Iron Age. Some pieces of Epineolithic and Iron Age pottery were also found at the dwelling site.

Ref. Kankkunen (1992), Ruonavaara (1992), Purhonen and Ruonavaara (1994).

#### **SALO SERIES, LAITILA**

x = 6752 00, y = 1534 80; 30 m a.s.l.

Coll. 1992 by B. Roeck-Hansen and subm. by A. Nissinaho.

General comment (AN): The radiocarbon dates give age to a stone row of an agrarian landscape which has its roots in the Iron Age.

Ref. Roeck-Hansen and Nissinaho (1995).

#### **Hel-3228 Sample 1**

charcoal, depth 0.55-0.57 m

$920 \pm 110$

$\delta^{13}\text{C} = -25.0\text{\textperthousand}$

#### **Hel-3229 Sample 2**

charcoal, depth 0.30-0.35 m

$910 \pm 100$

$\delta^{13}\text{C} = -24.8\text{\textperthousand}$

#### **Hel-3230 Sample 4**

charcoal, depth 0.30-0.35 m

$1610 \pm 100$

$\delta^{13}\text{C} = -25.5\text{\textperthousand}$

**Hel-3231 - Hel-3233** See SUOMUSSALMI SERIES Hel-3034.

#### **Hel-3234 TÖRMÄ, KEMINMAA**

$2220 \pm 110$

$\delta^{13}\text{C} = -23.7\text{\textperthousand}$

65°54'N, 24°43'E

x = 7311 86, y = 2532 73, 27.5-30 m a.s.l.

Coll. 1989 and subm. 1992 by J. Okkonen.

KT-89 Sample 3, charcoal, depth 0.50-0.55 m

Comment (JO): The sample is taken from a pit hearth situated in a late Bronze Age/Early Iron Age dwelling site.

**Hel-3235 LÄNKIMAA, KEMI**  $1130 \pm 100$   
 $\delta^{13}\text{C} = -23.9\text{\%}$

65°45'N, 24°40'E

x = 7325 03, y = 2530 17, 14.43 m a.s.l.

Coll. 1992 by T. Ylimaunu and subm. by J. Okkonen.

KL-92 Sample 12, charcoal, depth 0.20-0.40 m

Comment (JO): The sample is taken from a fireplace. No datable artefacts were found. According to the shore line chronology, an Iron Age date was expected.

Ref. Eskola and Ylimaunu (1993).

**Hel-3236 KIIMAMAA, KEMINMAA**  $2210 \pm 100$   
 $\delta^{13}\text{C} = -24.2\text{\%}$

65°43'N, 24°45'E

x = 7292 10, y = 2534 41, 29.58-29.63 m a.s.l.

Coll. and subm. 1992 by J. Okkonen.

KK-92 Sample 13

charcoal, depth 0.60-0.65 m

Comment (JO): The sample is taken from a boiling pit situated near a burial cairn. The date agrees well with the archaeological evidence.

Ref. Okkonen (1993).

### ISO HATTULAMPI SERIES, ENONTEKIÖ

60°38'N, 23°36'E; 386 m a.s.l.

Coll. 1991 and subm. 1992 by H. Hyvärinen.

General comment (HH): A pollen stratigraphical site used for the reconstruction of the Holocene forest history and tree line changes in northern Fennoscandia. The dates are stratigraphically consistent. In accordance with the radiocarbon evidence from several other lakes in Finnish Lapland, a clear acceleration in the rate of sedimentation occurs between ca 5000 and 4000 years ago which is believed to reflect a change towards increased climatic humidity.

Ref. Hyvärinen and Alhonen (1994), Mäkelä *et al.* (1994), Hyvärinen and Mäkelä (1996).

**Hel-3237 Sample 1**  $1330 \pm 110$   
 $\delta^{13}\text{C} = -27.2\text{\%}$

### PIELPPAJÄRVI SERIES, INARI

68°56'N, 27°09'; 140 m a.s.l.  
Coll. 1991 and subm. 1992 by S. Hicks.

General comment (SH): The peat profile is from a mire immediately adjacent to a Saami winter village. The pollen evidence clearly reveals the settlement phase associated with this village. The two dated horizons (Hel-3251 and Hel-3252) refer to the beginning and end of this settlement phase, respectively.

Ref. Hicks (1993, 1994, 1995).

**Hel-3251 Sample 1** modern  
peat, depth 0.30-0.33 m  $\delta^{13}\text{C} = -28.5\text{\%}$

Comment(SH): Taking into account the peat stratigraphy, pollen concentration and historical evidence, the date for this horizon is estimated as AD 1810.

**Hel-3252 Sample 2**  $160 \pm 100$   
peat, depth 0.48-0.52 m  $\delta^{13}\text{C} = -28.9\text{\%}$

### LINNASUO SERIES, IMATRA

61°10'N, 28°50'E; 63 m a.s.l.

Coll. and subm. 1992 by I. Delusin.

Ref. Delusin and Donner (1995).

**Hel-3253 Sample 1**  $5200 \pm 120$   
peat, depth 0.30-0.35 m  $\delta^{13}\text{C} = -29.0\text{\%}$

Comment (ID): Peat immediately below a layer of silty sand formed when Linnasuo was flooded as a result of the formation of the river Vuoksi, dated at 5200 BP.

**Hel-3254 Sample 2**  $2840 \pm 110$   
peat, depth 0.18-0.21 m  $\delta^{13}\text{C} = -29.2\text{\%}$

Comment (ID): Peat above a layer of silty sand formed when Linnasuo was flooded, dating the renewed peat growth after the formation of the river Vuoksi.

### LATOKANGAS SERIES, YLIKIIMINKI

65°04'N, 26°09'E; 77 m a.s.l.

Coll. 1990 by K-M. Mäkivuoti and subm. 1992 by M. Torvinen.

General comment (MT): The results are in conflict with the artefactual dating (Stone Age, Sär 1 -phase, 6000 - 5500 BP).

**Hel-3255 Sample 1 KM 25731:8 23**  $3970 \pm 130$   
charcoal, depth 0.45 m  $\delta^{13}\text{C} = -25.8\text{\%}$

**Hel-3256 Sample 2 KM 25731:8 25**  $3880 \pm 110$   
charcoal, depth 0.55 m  $\delta^{13}\text{C} = -25.3\text{\%}$

**Hel-3257 Sample 3 KM 25731:8 32**  $4120 \pm 110$   
charcoal, depth 0.15 m  $\delta^{13}\text{C} = -25.5\text{\%}$

**Hel-3258 Sample 4 KM 25731:8 34**       $2360 \pm 110$   
 charcoal, depth 0.25 m       $\delta^{13}\text{C} = -26.2\text{\textperthousand}$

**Hel-3259 SAWMILL, HYRYNSALMI**       $6300 \pm 120$   
 $\delta^{13}\text{C} = -24.8\text{\textperthousand}$

64°42'N, 28°29'E; 159.25 m a.s.l.  
 Coll. and subm. 1992 by T. Rostedt.

KM 27201:1441  
 charcoal from a fireplace, depth 0.38 m

Comment (TR): Dwelling place with Sär 1 ceramics.

**Hel-3260 See ÅLAND CHURCHES SERIES (Hammarland) Hel-2937.**

#### IITTALA SERIES, KALVOLA

61°05'N, 24°10'E

Coll. and subm. 1992 by E-L. Schulz.

**Hel-3261 Sample 1**       $460 \pm 120$   
 charcoal, depth 0.50 m       $\delta^{13}\text{C} = -25.5\text{\textperthousand}$   
 Comment (E-L S): Charcoal from the bottom of a pile of stones,  
 15th - 19th century slash-and-burn field.

**Hel-3262 Sample 2**       $160 \pm 120$   
 charcoal, depth 0.50 m       $\delta^{13}\text{C} = -26.4\text{\textperthousand}$   
 Comment (E-L S): Charcoal from the bottom of a pile of stones,  
 15th - 19th century slash-and-burn field.

**Hel-3263 Sample 3**      modern  
 charcoal, depth 0.45 m       $\delta^{13}\text{C} = -25.6\text{\textperthousand}$   
 Comment (E-L S): Charcoal from a destroyed pile of stones,  
 17th - 19th century slash-and-burn field.

**Hel-3264 TORTTOLANMÄKI, HATTULA**       $4540 \pm 120$   
 $\delta^{13}\text{C} = -24.2\text{\textperthousand}$

61°03'N, 24°19'E; 95 m a.s.l.  
 Coll. and subm. 1992 by E-L. Schulz.  
 998/1026/4, charcoal, depth 0.90 m  
 Comment (E-L S): Charcoal from a pit, Battle Axe culture - Iron Age settlement.

#### SÄRKÄNSUO DRAINED SITE SERIES, ILOMANTSJ

62°48'N, 30°58'E; 145 m a.s.l.

Coll. 1991 by K. Tolonen and J. Silvola, subm. by K. Tolonen.

General comment (KT): Hel-3165 - 3270 and Hel-3377 are from a long core obtained from the drained site of the "Suosilmu" research programme. Before ditching, the site was slightly minerotrophic short sedge fen with *Spagnum papillosum*. The datings are stratigraphically consistent and they are analysed for carbon accumulation figures in Tolonen and Turunen (1996).

<b>Hel-3265 Sä O/Sample 1</b>	<b>980 ± 80</b>
peat, depth 0.40-0.50 m	$\delta^{13}\text{C} = -26.5\text{\textperthousand}$

peat, depth 0.70-0.80 m	$\delta^{13}\text{C} = -26.5\text{\textperthousand}$

## PERU SERIES

Coll. and subm. 1991 by M. Räsänen.

General comment (MR): The samples dated are wood debris and tree trunks collected in 6 to 25 m high river terrace deposits along River Madre de Dios and its tributaries in southern Peruvian lowland rain forest. The sample Hel-3304 dates wood of a Holocene river terrace. Samples Hel-3298 and Hel-3300 may indicate terrace deposition around 30 000 radiocarbon years ago. The rest of the dates between 36 000 to 41 000 most probably come from terraces which depositional phases are too old to be dated by radiocarbon method. Discussion based on this material on similar type of dates from Amazonia can be found in Räsänen and Irion, (in press).

Ref. Räsänen and Irion (in press).

wood, depth 3.20 m	
Comment (JS): The sample is from a wooden weir found when digging a drainage channel of the Lake Jurvanjärvi by the river Närvijoki (Närpiönjoki). The height above sea level indicates the ground level in close vicinity to the find place.	

### LAKKASUO SPRUCE FEN SERIES, ORIVESI

Coll. and subm. 1992 by K. Tolonen.

General comment (KT): Datings of Hel-3283 through Hel-3293 are from a long core obtained from Lakkasuo, *Myrtillus* spruce mire site for carbon accumulation studies. The dates are stratigraphically consistent. The cumulative mass *versus* age curve was strongly convex whence it was not possible to apply Clymo's (1984) model for the actual rate of carbon accumulation at this site. The probable reason was the repeated occurrence of severe mire fires in the upper half of the profile.

Ref. Tolonen and Turunen (1996).

<b>Hel-3283 La 5/Sample A1</b>	$2810 \pm 100$

### BRAGENESET SERIES, NORDAUSTLANDET, SVALBARD

79°44'N, 18°50'E

Coll. 1955 and subm. 1992 and 1993 by J. Donner.

General comment (JD): The shells from the till of the end-moraine of the advance of Vestfonna against Brageneset between AD 1861 and 1899 are from the time when the ice margin had retreated from Brageneset after the last glaciation. The shells were incorporated into the till of the young end-moraine during the re-advance of the ice.

Ref. Donner and West (1995).

<b>Hel-3289 Sample 1</b>	$9180 \pm 150$

### PÖRRINMÖKKI 2 SERIES, RÄÄKKYLÄ

62°11'N, 29°54'E

Coll. and subm. 1992 by P. Pesonen.

General comment (PP): The samples are from a Stone Age settlement site with early Asbestos Ware, typical Comb Ware, Kierikki and Pöljä ceramics as well as early Metal Period ceramics. Only Hel-3295 is in good agreement with the artefact material of the sample context. The other dates show early Metal Period activity in the area.

Ref. Pesonen (1995, 1996).

<b>Hel-3295 Sample 1</b>	$3850 \pm 120$

## SÄTÖS SERIES, OUTOKUMPU

62°43'N, 29°06'E

Coll. and subm. 1992 by T. Karjalainen.

General comment (TK): The samples are taken from a Neolithic dwelling site, which contains several house depressions in different terraces of the shore line of the ancient lake Suursaimaa.

**Hel-3324 Sample 1**  $4230 \pm 100$   
 $\delta^{13}\text{C} = -25.2\text{\%}$

91.92 m a.s.l.

charcoal, depth 0.30 m

Comment (TK): The sample is recent and does not date the site.

**Hel-3325 Sample 2**  $4230 \pm 110$   
 $\delta^{13}\text{C} = -25.5\text{\%}$

89.89 m a.s.l.

charcoal, depth 0.45-0.50 m

Comment (TK): The sample is taken from a rubbish/cooking pit.

**Hel-3344 Sample 3**  $4490 \pm 150$   
 $\delta^{13}\text{C} = -25.9\text{\%}$

88.99 m a.s.l.

charcoal, depth 0.50 m

Comment (TK): The sample is taken from soot and reddish soil, which obviously belonged to a fireplace.

**Hel-3345 Sample 4**  $6150 \pm 140$   
 $\delta^{13}\text{C} = -29.6\text{\%}$

87.32 m a.s.l.

peat, depth 0.50-0.57 m

Comment (TK): The sample is taken from a swamp in front of the site. The turf is taken just above the mineral soil and it indicates the time, when the swamp started to grow in the bay of the ancient lake.

**Hel-3326 - Hel-3338** See ÅLAND CHURCHES SERIES (Saltvik) Hel-2937.

## YMMRÄISENMAA SERIES, ENONTEKIÖ

68°28'N, 32°25'E; 370 m a.s.l.

Coll. 1991 and subm. 1992 by H. Hyvärinen.

General comment (HH): A pollen stratigraphical site used for the reconstruction of the Holocene forest history and tree line change in northern Fennoscandia. The dates are stratigraphically consistent. In accordance with the radiocarbon evidence from several other lakes in Finnish Lapland, a clear acceleration in the rate of sedimentation occurs between ca 5000 and 4000 years ago which is believed to reflect a change towards increased climatic humidity.

Ref. Hyvärinen and Mäkelä (1996).

**Hel-3339 Sample 1A**  $8010 \pm 130$   
 $\delta^{13}\text{C} = -28.3\text{\%}$

### KUUSISTO CASTLE SERIES, KUUSISTO

Coll. 1992 by K. Uotila and subm. by A. Suna.

General comment (KU): In the year 1992, twelve samples were gathered for C-14 dating from the II bailey and west wing of the main castle at the Medieval bishop's castle in Kuusisto. Nine of the mortar samples were taken directly from the walls, one mortar sample was taken from the soil during excavations, and two samples were charcoal. The samples represent trial samples for the evaluation of the usefulness of the C-14 dating on sites such as the Kuusisto castle.

Comment (MH): The sample is taken from the planking between the frames 9 and 10.	

## TURKU CASTLE SERIES, TURKU

Subm. 1992 by K. Drake.

General comment (K.Uotila): During the Turun Linna project, four mortar samples were gathered under the supervision of Knut Drake. The samples were taken from the eastern tower and north-eastern part of the main castle.

Ref. Uotila (1998).

<b>Hel-3380 Sample 1/1992</b>	$760 \pm 90$
mortar, depth 2.20-2.30 m	$\delta^{13}\text{C} = -16.8\text{\textperthousand}$
<b>Hel-3381 Sample 2/1992</b>	$740 \pm 80$
mortar, depth 0.10 m	$\delta^{13}\text{C} = -15.2\text{\textperthousand}$
<b>Hel-3382 Sample 3/1992</b>	$690 \pm 80$
mortar, depth 1.40-1.60 m	$\delta^{13}\text{C} = -14.9\text{\textperthousand}$
<b>Hel-3383 Sample 4/1992</b>	$770 \pm 80$
mortar, depth 1.10-1.20 m	$\delta^{13}\text{C} = -16.4\text{\textperthousand}$
<b>Hel-3384 RUKTAJAVRI 6/92, LUOMUSJÄRVI</b>	$1600 \pm 100$
x = 7708 52, y = 472 44; 325 m a.s.l. Coll. and subm. 1992 by J. Hietaranta. peat, depth 0.80-0.90 m	$\delta^{13}\text{C} = -28.5\text{\textperthousand}$

## ABISKO Ö SERIES, NISSUNJOHKA, SWEDEN

68°20'N, 18°49'E; 420 m a.s.l.

Coll. 1991 and subm. 1993 by M. Seppälä.

<b>Hel-3385 Abis-1</b>	$910 \pm 120$
peat, depth 0.28-0.30 m	$\delta^{13}\text{C} = -27.0\text{\textperthousand}$
<b>Hel-3386 Abis-2</b>	$900 \pm 90$
peat, depth 0.30-0.32 m	$\delta^{13}\text{C} = -28.0\text{\textperthousand}$
<b>Hel-3387 Abis-3</b>	$1080 \pm 100$
peat, depth 0.38-0.40 m	$\delta^{13}\text{C} = -26.1\text{\textperthousand}$
<b>Hel-3388 Abis-4</b>	$1410 \pm 100$
peat, depth 0.40-0.42 m	$\delta^{13}\text{C} = -27.6\text{\textperthousand}$

<b>Hel-3399 Sample 3</b>	$2880 \pm 100$
charcoal, depth 0.14 m	$\delta^{13}\text{C} = -25.9\text{\textperthousand}$
<b>Hel-3400 Sample 4</b>	$3720 \pm 120$
charcoal, depth 0.17 m	$\delta^{13}\text{C} = -26.7\text{\textperthousand}$

## MANTSINSAARI SERIES, LAKE LADOGA, RUSSIA

61°20'N, 31°35'E

Coll. and subm. 1993 by J. Donner.  
Ref. Delusin and Donner (1995).

**Hel-3401 Samples B1+B2+B3**                                     $5170 \pm 120$   
 18.7 m a.s.l.     $\delta^{13}\text{C} = -30.0\text{\textperthousand}$   
 shells, depth 0.65-0.75 m  
 Comment (JD): Peat from core taken from a bog on the lee side of beach ridge formed during the transgression of Lake Ladoga.

**Hel-3402 Sample A**       $2890 \pm 80$   
 17.6 m a.s.l.       $\delta^{13}\text{C} = -28.0\text{\textperthousand}$   
 shells, depth 0.45-0.50 m  
 Comment (JD): Peat covered by sand at the outer edge of beach ridge  
 formed during the transgression of Lake Ladoga before the formation of  
 River Neva between about 2900 and 2500 B.P.

#### **MOTTISUO SERIES, VANTAA**

60°19'N, 24°56'E; 43 m a.s.l.

Coll. and subm. 1993 by A. Korhola.

Ref. Korhola (1995b).

<b>Hel-3403 Sample 1</b> gyttja, depth 6.84-6.89 m	$8150 \pm 150$ $\delta^{13}\text{C} = -27.4\text{\textperthousand}$
<b>Hel-3404 Sample 2</b> gyttja, depth 6.71-6.77 m	$7950 \pm 120$ $\delta^{13}\text{C} = -28.1\text{\textperthousand}$

#### KUORSALO SERIES. KUORSALO

15 m a.s.l.

Coll. 1992 by K. Tolonen and M. Tolonen, subm. 1993 by M. Tolonen.

<b>Hel-3405 Sample 1</b> peat, depth 0.32-0.36 m	$790 \pm 100$ $\delta^{13}\text{C} = -28.5\text{\textperthousand}$
<b>Hel-3406 Sample 2</b> peat, depth 0.54-0.58 m	$2990 \pm 110$ $\delta^{13}\text{C} = -28.9\text{\textperthousand}$

<b>Hel-3407 Sample 3</b>	$3580 \pm 110$
peat, depth 0.61-0.65 m	$\delta^{13}\text{C} = -29.0\text{\textperthousand}$
<b>Hel-3408 Sample 4</b>	$3910 \pm 100$
peat, depth 0.71-0.75 m	$\delta^{13}\text{C} = -28.8\text{\textperthousand}$
<b>Hel-3409 Sample 5</b>	$4210 \pm 100$
peat, depth 0.92-0.97 m	$\delta^{13}\text{C} = -28.8\text{\textperthousand}$
<b>Hel-3410 Sample 6</b>	$4220 \pm 90$
peat, depth 1.08-1.18 m	$\delta^{13}\text{C} = -27.6\text{\textperthousand}$

**Hel-3411 - Hel-3422** See MUTUSJÄRVI & IIJÄRVI SERIES Hel-3009.

### KANANIEMENSUO SERIES, PYHTÄÄ

22 m a.s.l.  
Coll. 1992 and subm. 1993 by M. Suoknuuti.

<b>Hel-3423 Aapa 1</b>	$3370 \pm 110$
peat, depth 4.48-4.58 m	$\delta^{13}\text{C} = -27.5\text{\textperthousand}$
<b>Hel-3424 Aapa 2</b>	$3740 \pm 110$
peat, depth 4.84-4.94 m	$\delta^{13}\text{C} = -29.1\text{\textperthousand}$
<b>Hel-3425 Aapa 4</b>	$4130 \pm 100$
peat, depth 5.90-6.00 m	$\delta^{13}\text{C} = -28.1\text{\textperthousand}$
<b>Hel-3426</b>	$4140 \pm 120$
peat, depth 6.97-7.05 m	$\delta^{13}\text{C} = -28.3\text{\textperthousand}$
<b>Hel-3427 Lamminsuon keidas</b>	$4920 \pm 100$
peat, depth 4.05-4.10 m	$\delta^{13}\text{C} = -28.9\text{\textperthousand}$
<b>Hel-3428 Aapa 5</b>	$3250 \pm 100$
peat, depth 4.75-4.85	$\delta^{13}\text{C} = -28.0\text{\textperthousand}$

**Hel-3429 - Hel-3442** See MUTUSJÄRVI & IIJÄRVI SERIES Hel-3009.

### PYYSUO SERIES, KISKO

60°15'N, 23°35'E; 30 m a.s.l.  
Coll. 1989 and subm. 1993 by A. Korhola.  
Ref. Korhola and Tikkанen (1997).

**Hel-3443 Pyy 1**                     $2530 \pm 80$   
 peat, depth 4.02-4.08 m             $\delta^{13}\text{C} = -27.4\text{\textperthousand}$

**Hel-3444 Pyy 2**                     $2910 \pm 100$   
 peat, depth 4.14-4.20 m             $\delta^{13}\text{C} = -30.1\text{\textperthousand}$

#### TERVALAMPI SERIES, TAAVETTI

60°55'N, 27°35'E; 99.3 m a.s.l.  
 Coll. and subm. 1993 by A. Korhola.

**Hel-3445 Terva 1**                     $8370 \pm 90$   
 peat, depth 2.02-2.08 m             $\delta^{13}\text{C} = -27.4\text{\textperthousand}$

**Hel-3446 Terva 2**                     $4940 \pm 100$   
 peat, depth 3.05-3.12 m             $\delta^{13}\text{C} = -27.2\text{\textperthousand}$

**Hel-3447 RAHIKKALANSUO, SAVITAIPALE**                     $1810 \pm 80$   
 $\delta^{13}\text{C} = -29.5\text{\textperthousand}$

61°20'N, 27°50'E; 78.5 m a.s.l.  
 Coll. and subm. 1993 by A. Korhola.  
 peat, depth 2.42-2.48 m

#### HARAMOSSEN SERIES, ESPOO

60°16'N, 24°36'E; 68 m a.s.l.  
 Coll. and subm. 1993 by A. Korhola.

**Hel-3448 Hara 1**                     $9120 \pm 120$   
 peat, depth 3.02-3.10 m             $\delta^{13}\text{C} = -28.8\text{\textperthousand}$

**Hel-3449 Hara 2**                     $7480 \pm 110$   
 peat, depth 2.28-2.36 m             $\delta^{13}\text{C} = -28.4\text{\textperthousand}$

**Hel-3450 ENSKÄR, ÅLAND ISLANDS**                     $180 \pm 80$   
 $\delta^{13}\text{C} = -19.6\text{\textperthousand}$

x = 6678.6, y = 573.1; less than 5 m a.s.l.

Coll. and subm. 1992 by J. Storå.

Comment (JS): Sample of a skeleton found on the Island of Enskär in the Signilskär archipelago, west of Main Åland. An investigation revealed that it was a man, ca 20 years of age, who had been buried under a small cairn, close to the shore. However, no indication of the age of the burial was found.

**Hel-3451 VANNIPUULA OUTLET, SYSMÄ**
 $4510 \pm 100$   
 $\delta^{13}\text{C} = -29.9\text{\textperthousand}$ 

61°37'N, 25°51'E; 96.5 m a.s.l.

Coll. and subm. 1993 by M. Tikkanen.

gyttja, depth 2.92-2.97 m

Comment (MT): The opening of the third outflow channel and the end of the Vannipuula stage in the history of the Puula Lake Complex.

Ref. Tikkanen (1995).

**Hel-3452 TAMMIPUULA OUTLET, LUHANKA**
 $5770 \pm 120$   
 $\delta^{13}\text{C} = -29.7\text{\textperthousand}$ 

61°50'N, 25°52'E; 101 m a.s.l.

Coll. and subm. 1993 by M. Tikkanen.

gyttja, depth 1.93-1.98 m

Comment (MT): The end of the bifurcation stage in the history of the Puula Lake Complex.

Ref. Tikkanen (1995).

**VÄTSÄRI SERIES, HIRVASLOMPOLO**

69°29'N, 29°10'E; 190 m a.s.l.

Coll. and subm. by H. Hyvärinen 1993.

General comment (HH): A pollen stratigraphical site used for the reconstruction of the Holocene forest history and tree line changes in northern Fennoscandia. The three uppermost dates in the series (Hel-3458, 3457 and 3456) imply an unreasonably high rate of sedimentation and are out of agreement with the pollen stratigraphy; hence they are regarded as too old. The reason could be an input of older organic material eroded from the basin margins in connection with the lake level rise/increased surface runoff.

Ref. Reiniainen and Hyvärinen (1997).

<b>Hel-3453 Sample 1</b>	$8760 \pm 160$
gyttja, depth 5.35-5.50 m	$\delta^{13}\text{C} = -29.8\text{\textperthousand}$
<b>Hel-3454 Sample 2</b>	$6940 \pm 160$
gyttja, depth 5.05-5.15 m	$\delta^{13}\text{C} = -32.8\text{\textperthousand}$
<b>Hel-3455 Sample 3</b>	$4360 \pm 140$
gyttja, depth 4.75-4.85 m	$\delta^{13}\text{C} = -31.7\text{\textperthousand}$
<b>Hel-3456 Sample 4</b>	$4190 \pm 140$
gyttja, depth 4.45-4.55 m	$\delta^{13}\text{C} = -30.7\text{\textperthousand}$
<b>Hel-3457 Sample 5</b>	$3760 \pm 90$
